

OKI Semiconductor

MSM56V16160D/DH

2-Bank × 524,288-Word × 16-Bit SYNCHRONOUS DYNAMIC RAM

DESCRIPTION

The MSM56V16160D/DH is a 2-bank × 524,288-word × 16-bit synchronous dynamic RAM, fabricated in Oki's CMOS silicon-gate process technology. The device operates at 3.3 V. The inputs and outputs are LVTTTL compatible.

FEATURES

- Silicon gate, quadruple polysilicon CMOS, 1-transistor memory cell
- 2-bank × 524,288-word × 16-bit configuration
- 3.3 V power supply, ±0.3 V tolerance
- Input : LVTTTL compatible
- Output : LVTTTL compatible
- Refresh : 4096 cycles/64 ms
- Programmable data transfer mode
 - $\overline{\text{CAS}}$ latency (1, 2, 3)
 - $\overline{\text{CAS}}$ latency (2, 3)*¹
 - Burst length (1, 2, 4, 8, full page)
 - Burst length (1, 2, 4, 8)*¹
 - Data scramble (sequential, interleave)

*¹ : H version only.

- CBR auto-refresh, Self-refresh capability
- Package:

50-pin 400 mil plastic TSOP (Type II) (TSOPII50-P-400-0.80-K)

(Product : MSM56V16160D/DH-xxTS-K)

xx indicates speed rank.

PRODUCT FAMILY

| Family | Max. Frequency | Access Time (Max.) | |
|------------------|----------------|--------------------|------------------|
| | | t _{AC2} | t _{AC3} |
| MSM56V16160D-10 | 100 MHz | 9 ns | 9 ns |
| MSM56V16160D-12 | 83 MHz | 14 ns | 10 ns |
| MSM56V16160DH-15 | 66 MHz | 9 ns | 9 ns |

PIN CONFIGURATION (TOP VIEW)

50-Pin Plastic TSOP (II)
(K Type)

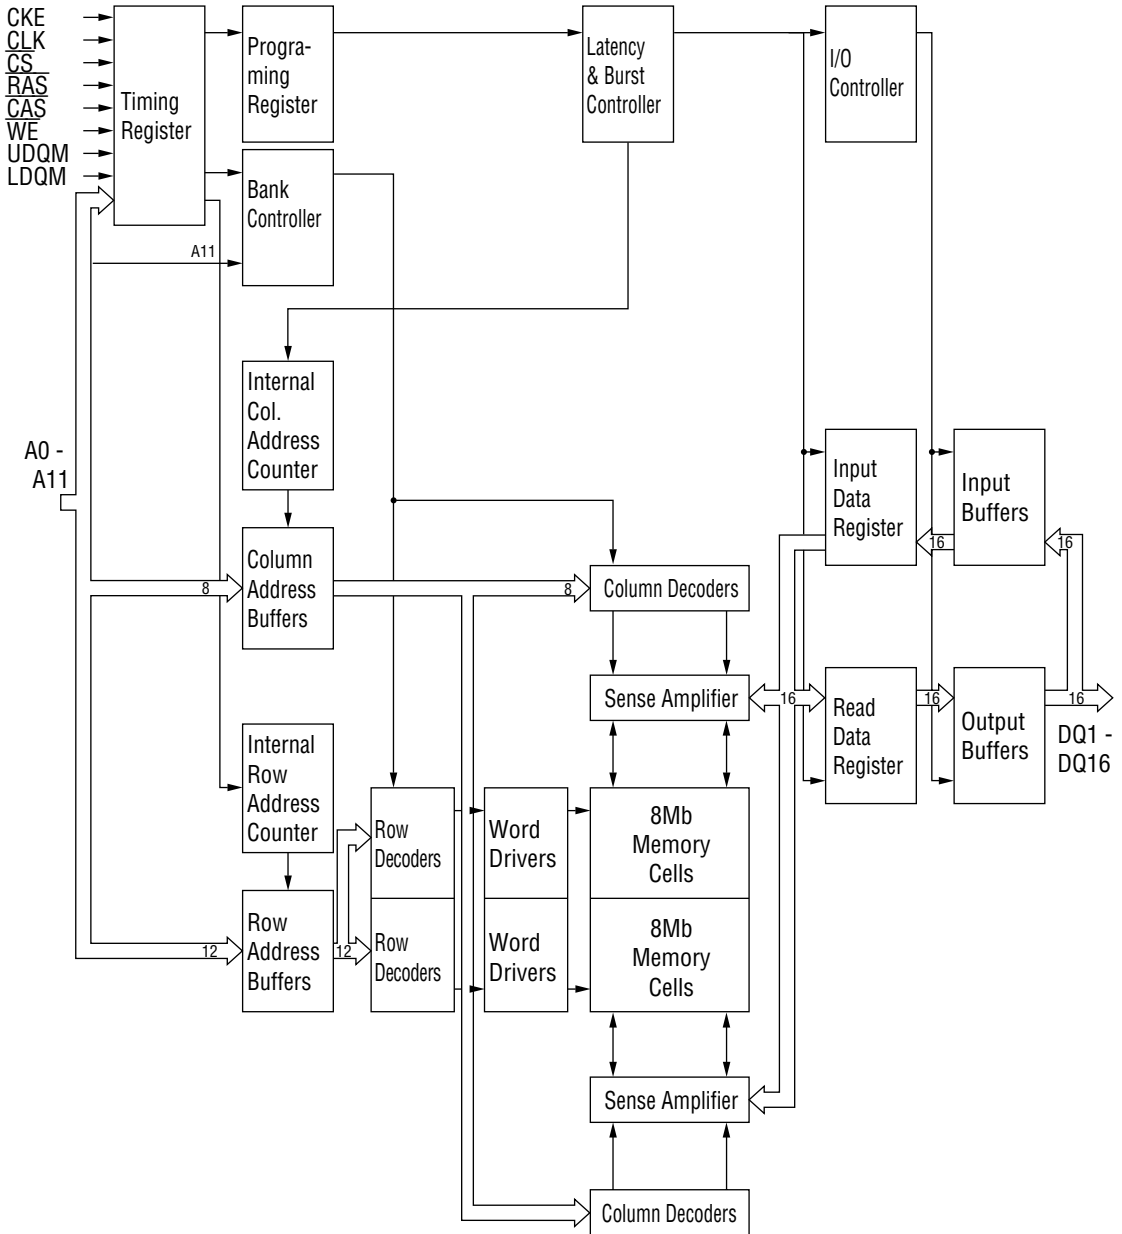

| Pin Name | Function | Pin Name | Function |
|------------------|-----------------------|------------------|----------------------------------|
| CLK | System Clock | UDQM, LDQM | Data Input/Output Mask |
| \overline{CS} | Chip Select | DQi | Data Input/Output |
| CKE | Clock Enable | V _{CC} | Power Supply (3.3 V) |
| A0 - A10 | Address | V _{SS} | Ground (0 V) |
| A11 | Bank Select Address | V _{CCQ} | Data Output Power Supply (3.3 V) |
| \overline{RAS} | Row Address Strobe | V _{SSQ} | Data Output Ground (0 V) |
| \overline{CAS} | Column Address Strobe | NC | No Connection |
| \overline{WE} | Write Enable | | |

Note: The same power supply voltage must be provided to every V_{CC} pin and V_{CCQ} pin.
The same GND voltage level must be provided to every V_{SS} pin and V_{SSQ} pin.

PIN DESCRIPTION

| | |
|---------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CLK | Fetches all inputs at the "H" edge. |
| \overline{CS} | Disables or enables device operation by asserting or deactivating all inputs except CLK, CKE, UDQM and LDQM. |
| CKE | Masks system clock to deactivate the subsequent CLK operation. If CKE is deactivated, system clock will be masked so that the subsequent CLK operation is deactivated. CKE should be asserted at least one cycle prior to a new command. |
| Address | Row & column multiplexed. Row address: RA0 – RA10 Column address: CA0 – CA7 |
| A11 | Selects bank to be activated during row address latch time and selects bank for precharge and read/write during column address latch time. A11 = "L" : Bank A, A11 = "H" : Bank B |
| \overline{RAS} \overline{CAS} \overline{WE} | Functionality depends on the combination. For details, see the function truth table. |
| UDQM, LDQM | Masks the read data of two clocks later when UDQM and LDQM are set "H" at the "H" edge of the clock signal. Masks the write data of the same clock when UDQM and LDQM are set "H" at the "H" edge of the clock signal. UDQM controls upper byte and LDQM controls lower byte. |
| DQi | Data inputs/outputs are multiplexed on the same pin. |

BLOCK DIAGRAM

ELECTRICAL CHARACTERISTICS**Absolute Maximum Ratings**(Voltages referenced to V_{SS})

| Parameter | Symbol | Rating | Unit |
|-----------------------------------------|-------------------|------------------------|------|
| Voltage on Any Pin Relative to V_{SS} | V_{IN}, V_{OUT} | -0.5 to $V_{CC} + 0.5$ | V |

| 1 | 1 | 1 | Reserved | | | 1 | 1 | 1 | Full Page*2 | Reserved |

*2: Not applicable to H version.

Note: A7, A8, A9, A10 and A11 should stay "L" during mode set cycle.

POWER ON SEQUENCE

1. With inputs in NOP state, turn on the power supply and start the system clock.
2. After the V_{CC} voltage has reached the specified level, pause for 200 μ s or more with the input kept in NOP state.
3. Issue the precharge all bank command.
4. Apply a CBR auto-refresh eight or more times.
5. Enter the mode register setting command.

AC Characteristics

Note 1, 2

| Write Command Input Time from Output | | t_{OWD} | 2 | | 2 | | 2 | | Cycle | |

- Notes :
1. AC measurements assume that $t_T = 1 \text{ ns}$ and $V_{IH}/V_{IL} = 2.0 \text{ V}/0.8 \text{ V}$.
 2. The reference level for timing of input signals is 1.4 V.
 3. Output load.

4. The access time is defined at 1.4 V.
5. If t_T is longer than 1 ns, then the reference level for timing of input signals is V_{IH} and V_{IL} .

TIMING WAVEFORM

Read & Write Cycle (Same Bank) @ $\overline{\text{CAS}}$ Latency = 2, Burst Length = 4

Single Bit Read-Write-Read Cycle (Same Page) @ $\overline{\text{CAS}}$ Latency = 2, Burst Length = 4

- *Notes:**
1. When \overline{CS} is set "High" at a clock transition from "Low" to "High", all inputs except CKE, UDQM, and LDQM are invalid.
 2. When issuing an active, read or write command, the bank is selected by A11.

| A11 | Active, read or write |
|-----|-----------------------|
| 0 | Bank A |
| 1 | Bank B |

3. The auto precharge function is enabled or disabled by the A10 input when the read or write command is issued.

| A10 | A11 | Operation |
|-----|-----|-------------------------------------------------------------|
| 0 | 0 | After the end of burst, bank A holds the idle status. |
| 1 | 0 | After the end of burst, bank A is precharged automatically. |
| 0 | 1 | After the end of burst, bank B holds the idle status. |
| 1 | 1 | After the end of burst, bank B is precharged automatically. |

4. When issuing a precharge command, the bank to be precharged is selected by the A10 and A11 inputs.

| A10 | A11 | Operation |
|-----|-----|------------------------------------|
| 0 | 0 | Bank A is precharged. |
| 0 | 1 | Bank B is precharged. |
| 1 | X | Both banks A and B are precharged. |

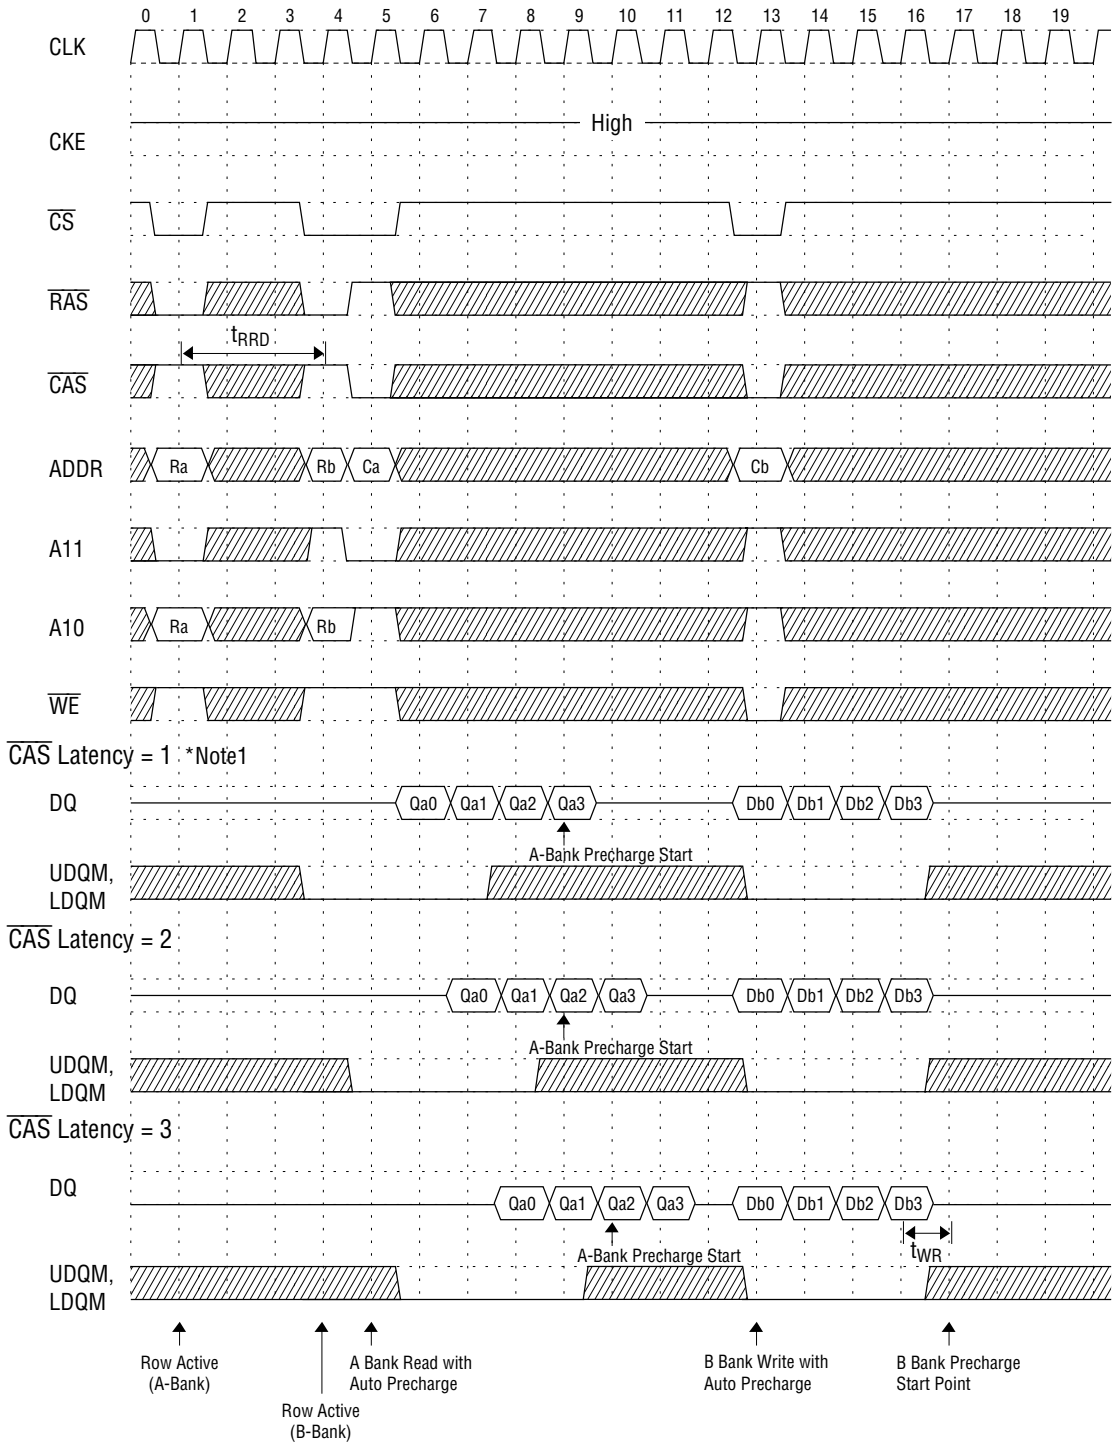

5. The input data and the write command are latched by the same clock (Write latency = 0).
6. The output is forced to high impedance by $(1 \text{ CLK} + t_{0HZ})$ after UDQM, LDQM entry.

Page Read & Write Cycle (Same Bank) @ $\overline{\text{CAS}}$ Latency = 2, Burst Length = 4

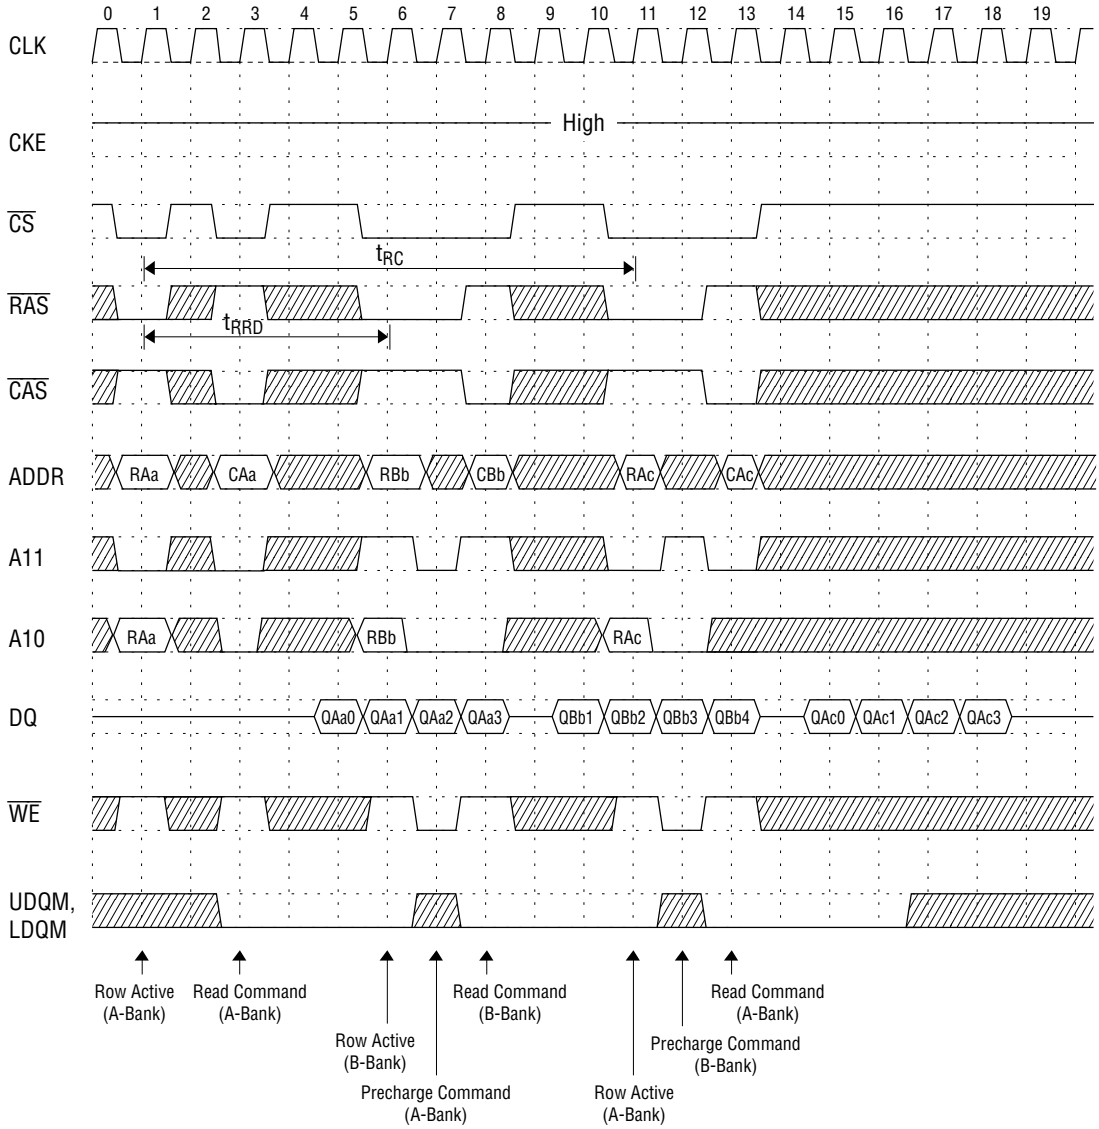

- *Notes:**
1. To write data before a burst read ends, UDQM and LDQM should be asserted three cycles prior to the write command to avoid bus contention.
 2. To assert row precharge before a burst write ends, wait t_{WR} after the last write data input. Input data during the precharge input cycle will be masked internally.

Read & Write Cycle with Auto Precharge @ Burst Length = 4

***Note:** 1. Not applicable to H version.

Bank Interleave Random Row Read Cycle @ $\overline{\text{CAS}}$ Latency = 2, Burst Length = 4

Bank Interleave Random Row Write Cycle @ $\overline{\text{CAS}}$ Latency = 2, Burst Length = 4

Bank Interleave Page Read Cycle @ $\overline{\text{CAS}}$ Latency = 2, Burst Length = 4

***Note:** 1. $\overline{\text{CS}}$ is ignored when $\overline{\text{RAS}}$, $\overline{\text{CAS}}$ and $\overline{\text{WE}}$ are high at the same cycle.

Bank Interleave Page Write Cycle @ $\overline{\text{CAS}}$ Latency = 2, Burst Length = 4

Bank Interleave Random Row Read/Write Cycle @ $\overline{\text{CAS}}$ Latency = 2, Burst Length = 4

Bank Interleave Page Read/Write Cycle @ $\overline{\text{CAS}}$ Latency = 2, Burst Length = 4

Clock Suspension & DQM Operation Cycle @ $\overline{\text{CAS}}$ Latency = 2, Burst Length = 4

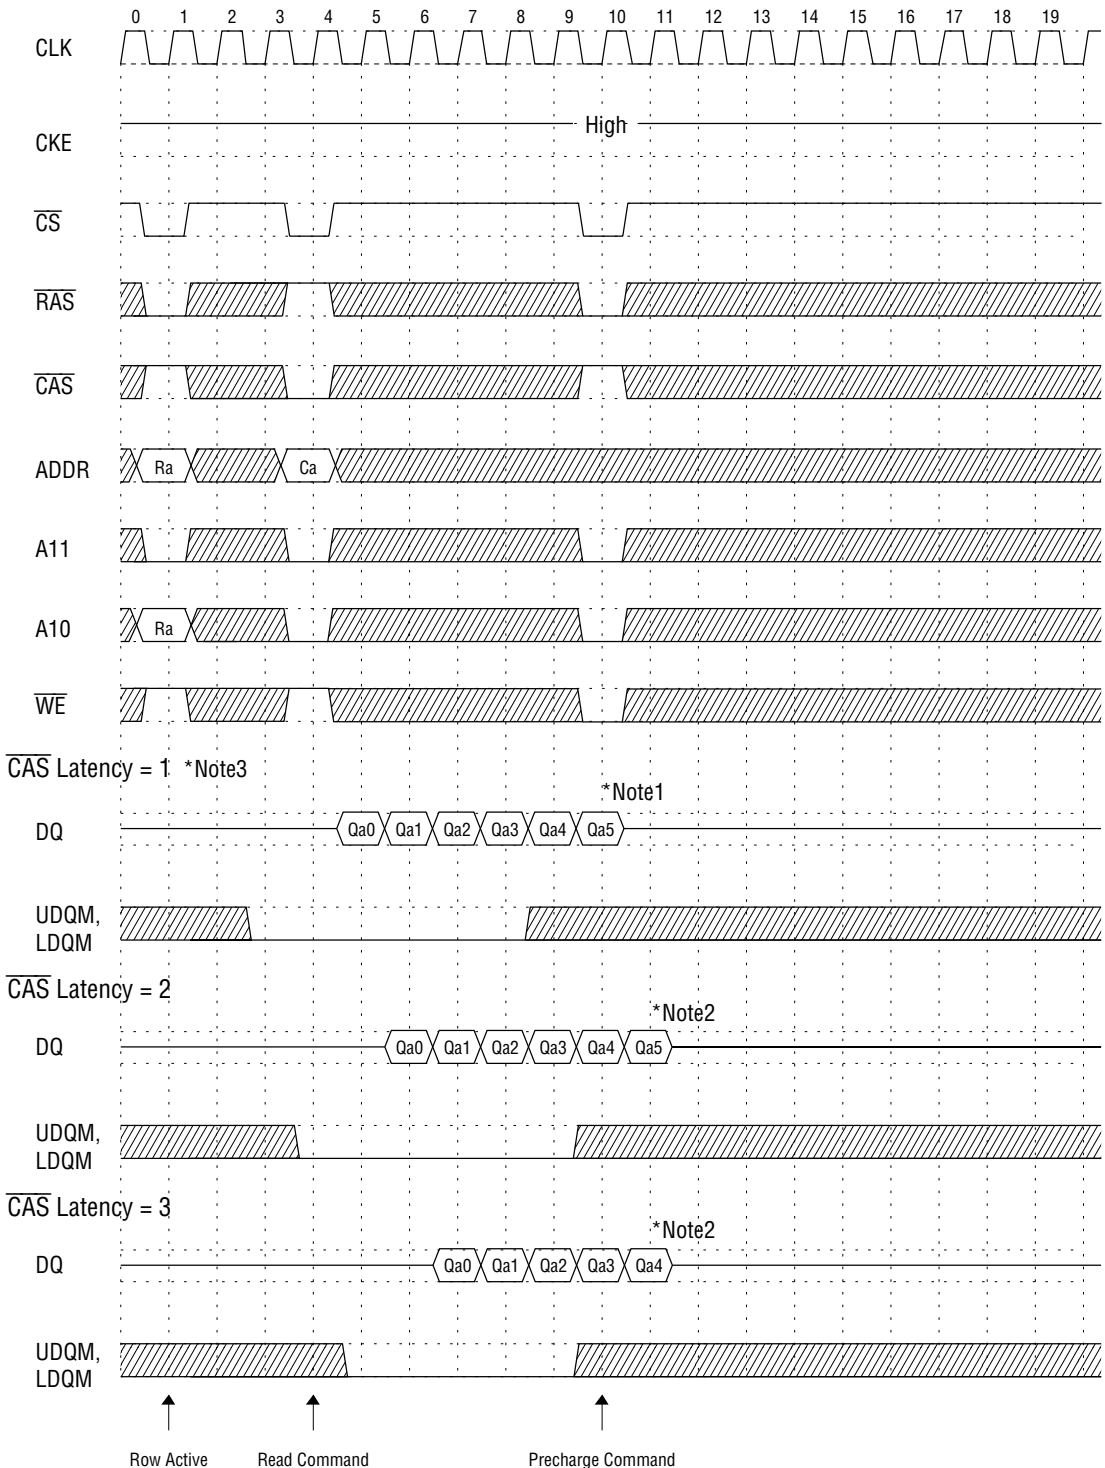

- *Notes:**
1. When Clock Suspension is asserted, the next clock cycle is ignored.
 2. When LDQM and UDQM are asserted, the read data after two clock cycles is masked.
 3. When LDQM and UDQM are asserted, the write data in the same clock cycle is masked.
 4. When LDQM is set High, the input/output data of DQ0 - DQ7 is masked.
When UDQM is set High, the input/output data of DQ8 - DQ15 is masked.

Read to Write Cycle (Same Bank) @ $\overline{\text{CAS}}$ Latency = 2, Burst Length = 4

***Note:** 1. In case $\overline{\text{CAS}}$ latency is 3, READ can be interrupted by WRITE.
 The minimum command interval is [burst length + 1] cycles.
 UDQM, LDQM must be high at least 3 clocks prior to the write command.

Read Interruption by Precharge Command @ Burst Length = 8

- *Notes:**
1. When the $\overline{\text{CAS}}$ latency = 1, and if row precharge is asserted before a burst read ends, then the read data will not output after the next clock cycle of the precharge command.
 2. When the $\overline{\text{CAS}}$ latency = 2 or 3, and if row precharge is asserted before burst read ends, then the read data will not output after the second clock cycle of the precharge command.

Power Down Mode @ $\overline{\text{CAS}}$ Latency = 2, Burst Length = 4

- *Notes:**
1. When both banks are in precharge state, and if CKE is set low, then the MSM56V16160D/DH enters power-down mode and maintains the mode while CKE is low.
 2. To release the circuit from power-down mode, CKE has to be set high for longer than $t_{PDE} (t_{SI} + 1 \text{ CLK})$.

ABBREVIATIONS

RA = Row Address

BA = Bank Address

NOP = No Operation command

CA = Column Address

AP = Auto Precharge

- Notes:
1. All inputs are enabled when CKE is set high for at least 1 cycle prior to the inputs.
 2. Illegal to bank in specified state, but may be legal in some cases depending on the state of bank selection.
 3. Satisfy the timing of t_{CCD} and t_{WR} to prevent bus contention.
 4. NOP to bank precharging or in idle state. Precharges activated bank by BA or A10.
 5. Illegal if any bank is not idle.

Note: 6. Power-down and self refresh can be entered only when all the banks are in an idle state.

PACKAGE DIMENSIONS

(Unit : mm)

Notes for Mounting the Surface Mount Type Package

The SOP, QFP, TSOP, SOJ, QFJ (PLCC), SHP and BGA are surface mount type packages, which are very susceptible to heat in reflow mounting and humidity absorbed in storage. Therefore, before you perform reflow mounting, contact Oki's responsible sales person for the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).
