

INTRODUCTION

The one chip calculator circuit DL5521 is either 12-digits capacity 2-memory or 10-digits. Capacity 2-memory electronic calculator on one chip CMOS/LSI.

DL5521 can drive the liquid crystal display (LCD) with single power supply. Single power supply operation, wide operating voltage range and low power consumption make it suitable for 1.5V solar battery operated calculator. Besides DL5521 can selectable with a pin-programmable to function of Power timer and Memory hold.

The following features are included;

Operational Features:

- Display: 12-digits or 10-digits (selectable with a pin-programmable) of data, 2-digits of sign, error symbol, memory load symbol.
- Algebraic mode.
- Standard 4 functions (+, -, x, ÷)
- Memory and grand total (GT) memory calculation
- Accumulating GT memory register with count up (down) item counter.
- Automatic percentage operation with add-on, discount.
- Automatic delta percentage, mark-up and markdown operations.
- Square root.
- Constant calculation.
- Chain calculation.
- Change sign.
- Floating point or momentary mode (selectable with a switch).
- Fixed point ("0", "1", "2", "3", "4" or "6" places) or floating point (selectable with a switch).
- Adding point mode (selectable with a switch).
- Rounding switches (rounding up, down and off).
- Leading zero suppression.
- Trailing zero suppression.
- Punctuation on display, commas for thousands.
- Memory and GT memory contents indicator, turned on with non-zero in the memory and GT memory.
- Registration overflow, indicating that too many digits are entered (the most significant digit are protected).
- Result overflow, indicating during calculation (most function key are locked as it happened).
- Memory overflow indicating to flashing of memory load mark.
- Key roll over function.
- Floating minus.

Electrical Features;

- Complementary output buffer for direct driving of liquid crystal display (F.E.M LCD).
- Oscillator/clock generator internal to chip.
- Keyboard encoding internal to chip.
- Keyboard debouncing internal to chip.
- Automatic power on clear.
- Wide supply voltage range (1.2 ~ 1.8V).
- Very low power consumption (3.3 . μ W typ.).

Selection Mode Switch Functions

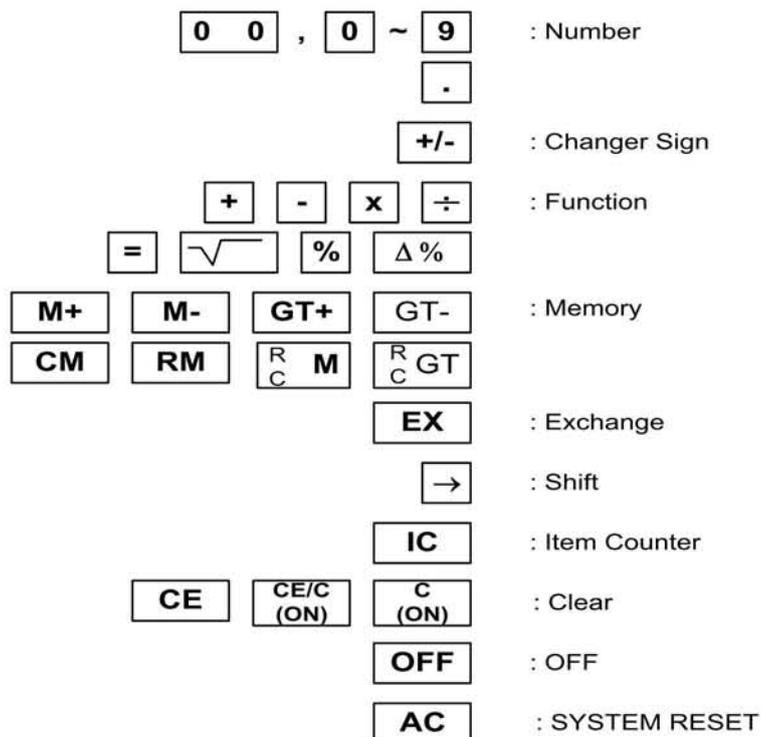

- MK: Memory Kill at Power OFF mode
- MH: Memory Hold at Power OFF mode
- GTK: GT memory Kill at Power OFF mode
- GTH: GT memory Hold at Power OFF mode
- A: Auto Power OFF and manual Power OFF
- \bar{A} : Manual Power OFF only
- 10/12: Fixed 10-digits or 12 - digits
- F: Floating decimal point mode
- 0/1/2/3/4/6: Fixed -point mode with rounding of the result to a fixed number of decimal digits
- \downarrow "CUT": Rounding to a fixed number of decimal digits with simple omission of any subsequent digits.
- \uparrow "UP": Rounding to a fixed number of decimal digits with adding "1" to the last significant bit if there are other digits to follow.
- $5\downarrow 4 \text{ -} "5/4"$ Either "CUT" rounding if the next digit is 0...4 or "UP" rounding if the next digit is 5...9.
- ADD: Additional fixed - point mode ("+" and "-" operations with integer operands are executed in the same way as with numbers multiplied by 1/100, fractional operands are not distorted)
- $\Sigma/\bar{\Sigma}$: When "=" operation is executed "GT+" operation follows or no follows
