Functional Description

- Power ON/OFF: push switch PSW to turn the power on or off.
- When power on: push the switch PSW, then it will generate a "beep" sound for 1/8 sec.
 - a) Under press PSW, displays all the segments LCD – «Totally ON» mode. After release PSW, it continue on for 1 sec.
 - b) After a., as described above, then shows the last-time measured temperature for 2 sec.
 - c) After b., shows the self-test temperature $37.00 \pm 0.01^\circ\text{C}$ for 2 sec. The $^\circ\text{C}$ mark is ON.
 - d) After c., displays the highest measured temperature, then the $^\circ\text{C}$ mark will flash at 1Hz.
 - e) If the temperature is $< 32.00^\circ\text{C}$, the display shows Lo $^\circ\text{C}$.
 - f) If the temperature is $> 43.00^\circ\text{C}$, the display shows Hi $^\circ\text{C}$.
 - g) The display always shows the higher temperature during the temperature measurement.
 - h) If the measured temperature does not change for more than 8 sec, the measurement is over and the $^\circ\text{C}$ mark flash stops.
 - i) When measurement is over,
if the temperature $< 37.50^\circ\text{C}$ the buzzer alarms for 4 sec, as follows:

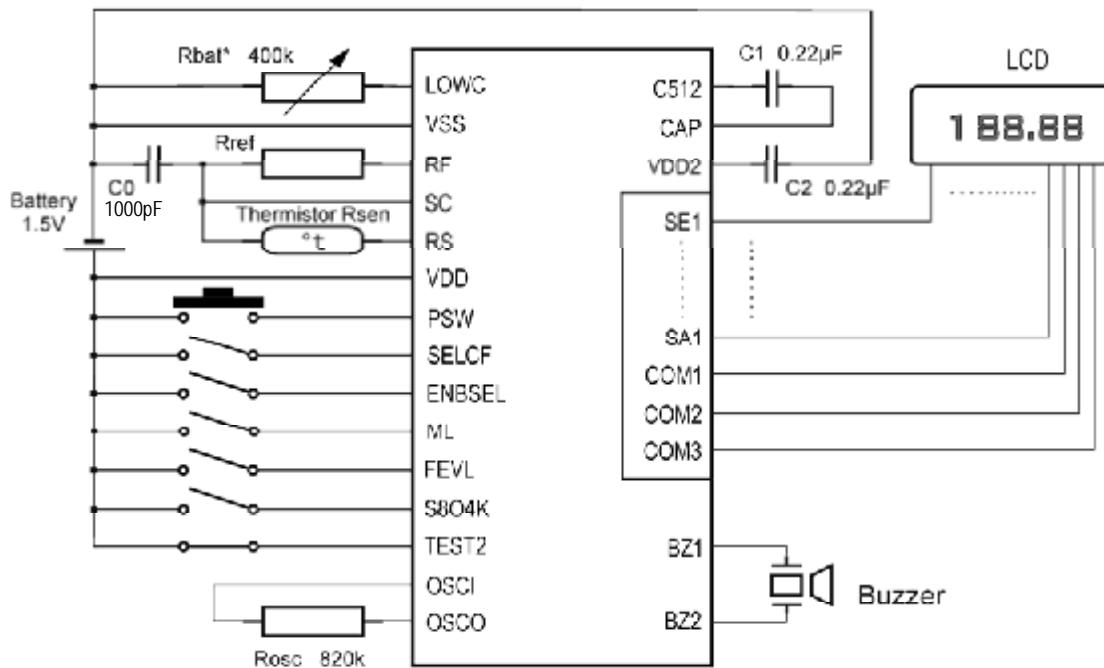

if the temperature $> 37.50^\circ\text{C}$, the buzzer alarms as follows:

- j) It will automatically turn the power off when measurement is over for 8 min 40 sec.
- k) When measurement is over, but if the temperature rises within 8 min 40 sec, and starts to count 8 min 40 sec again.
- l) When beep sound is on for 4 sec, the temperature is not measured.
- The frequency of the buzzer is 4kHz or 8kHz by pin option.
- Fever alarm is pin option.
- The low battery and "M" flag cannot display when the temperature shows Hi or Lo.
- When battery voltage is low, the battery mark "B" flashes at a speed of 1Hz and the measurement may not be accurate. The low voltage detect $1.35 \pm 0.05\text{V}$.
- During the process of mass production, in order to adjust the reference resistance Rref, let pin TEST2 be floating, the measured temperature will be the actual temperature of the measured environment. It can be up or down, not always the higher one.
- Under power OFF, if PSW button is pressed and withheld over 5 sec, 705CF shall change measurement unit selection mode. LCD will display the original temperature measurement unit. If pin SELCF not connected or set V_{SS} , init measurement unit is $^\circ\text{C}$. If pin SELCF set V_{DD} , init measurement unit is $^\circ\text{F}$. If continue hold PSW button over 2 sec, measurement unit will be change and IC generate a "beep" sound 1/16 sec. Release PSW before 2 sec, there is return «Totally ON» mode. After change unit for 2 seconds, IC automatically power OFF. If pin ENBSEL not connected, then the initial measurement unit not be changed.
