PERFORMANCE

SENSOTEC's High Line Wet/Wet Differential Pressure Models HL-Z and HL-A-5 are designed to accept extreme line pressures of up to 5000 psi.* This unique design features standard bonded foil strain gages on stainless steel. Liquid and gas differential pressures of 50 to 7500 psid are measured within a 0.25-0.50% full scale accuracy. Typical applications include flow measurement and laboratory testing.

NOTES Unless otherwise specified on order, amplified units with **4-20mA output will provide 4mA at 0 psid and 20mA at positive full scale** and the unit will not operate in the negative direction. An available alternative is to specify 4mA at negative full scale and 20mA at positive full scale. (Option 2j, 2k, 2n)

* On units > 200 psid the sum of full-scale pressure and line pressure must be < 9500 psi; on units < 200 psid, consult SENSOTEC.
