

# Infrared IrDA® Compliant Transceiver

## Technical Data

### Features

- Low Cost Infrared Data Link
- Guaranteed to Meet IrDA Physical Layer Specifications
  - 1 cm to 1 Meter Operating Distance
  - 30° Viewing Angle
  - 2.4 KBd to 115.2 KBd Data Rate
- Daylight Cancellation
- Easily Implemented Direct Connection to Various I/O Chips
- Small Form Factor
- Several Lead and Shipping Configurations Available
- Excellent EMI Immunity (> 10 V/m)

### Applications

- Data Comm: Serial Data Transfer Between:
  - Notebook Computers
  - Subnotebooks

### HSDL-1000

operate from 0 to 1 meter at a data rate of 115.2 Kbd per second at a 30° viewing angle.

The HSDL-1000 contains a high speed, high efficiency TS AlGaAs 875 nm LED, a PIN Silicon photodiode and an integrated circuit. The IC contains an LED driver, amplifiers and a quantizer.

The module is designed to interface directly with selected I/O chips that incorporate logic which performs pulse width modulation/demodulation.

## Truth Table

Inputs		LED	Outputs	
TXD	EI <sup>[1]</sup>		LEDA	RXD
V <sub>IH</sub>	X	ON	Low	Low <sup>[2]</sup>
V <sub>IL</sub>	EI <sub>H</sub>	OFF	High	Low <sup>[2]</sup>
V <sub>IL</sub>	EI <sub>L</sub>	OFF	High	High

X = Don't care.

### Notes:

1. EI – received in band light intensity present at detector surface.
2. Logic Low is a pulsed response. A receiver output low state V<sub>OL</sub> (RXD) is not indefinitely maintained, but is instead a pulsed response. The output low state is maintained for a duration dependent on the incident bit pattern and the incident intensity (EI).

### Notes:

1. EI – received in band light intensity present at detector surface.
2. Pulsed Response – Logic Low is a pulsed response. A receiver output low state V<sub>OL</sub> (RXD) is not indefinitely maintained but is instead a pulsed response. The output low state is maintained for a duration dependent on the incident bit pattern and incident intensity (EI).
3. The EI ≥ 3.6 μW/cm<sup>2</sup> condition guarantees the IrDA minimum receiver sensitivity of 4.0 μW/cm<sup>2</sup> while allowing for 10% light loss through a cosmetic window placed in front of the HSDL-1000. (See the Rx TH+ section at the end of this data sheet for information on receiver sensitivity over temperature, and in the presence of ambient light.)

## Application Circuit

Component	Recommended Value
$R_I$	300 Ohms $\pm$ 5%
$R_{LED}$	8.0 Ohms maximum
CX1	0.22 $\mu\text{F} \pm$ 10%
CX2	0.4 $\mu\text{F}$ minimum
CX3	0.10 $\mu\text{F} \pm$ 22%. Low inductance is critical
CX4	4.7 $\mu\text{F}$ minimum. Larger value is recommended for noisy supplies or environments.

### Rx TH+ (Receiver On-Threshold)

The maximum receiver on-threshold is equivalent to the minimum receiver sensitivity. Both are terms for the amount of light signal which must be present at the HSDL-1000 detector in order to trigger a low pulse on the receiver output (RXD). The IrDA Physical Layer Specification requires a minimum receiver sensitivity of  $4.0 \mu\text{W}/\text{cm}^2$ , at a Bit Error Rate of  $10^{-9}$ , and in the presence of the 10 klux of sunlight, 0-1000 lux of fluorescent

light, or 0-1000 lux of incandescent light. The fluorescent and incandescent specifications require minimum receiver sensitivity with 1000 lux incident onto the horizontal surface of the IR link. The resulting amount of fluorescent or incandescent light actually reaching the detector surface may vary between 0 and 500 lux depending upon the design of the housing around the HSDL-1000 module.

The HSDL-1000  $V_{OL}(RXD)$  specification guarantees a maximum receiver on-threshold of  $EI = 3.6 \mu\text{W}/\text{cm}^2$ , at a  $\text{BER} \leq 10^{-9}$ , and  $T_A = 0-70^\circ\text{C}$ . The  $EI = 3.6 \mu\text{W}/\text{cm}^2$  threshold guarantees the IrDA minimum receiver sensitivity of  $4.0 \mu\text{W}/\text{cm}^2$ , while allowing for 10% light loss through a cosmetic window placed in front of the HSDL-1000. The  $EI = 3.6 \mu\text{W}/\text{cm}^2$  threshold also guarantees receiver sensitivity with 10 klux of sunlight, 0-500 lux fluorescent light, or 0-500 lux of incandescent light incident on the HSDL-1000 detector surface.
