

RH High Pressure Measuring System

for Pressures from 100 ... 3 000 bar

Type RH...

Accurate high pressure measuring system for the use in process monitoring. Optionally available with digital or analog amplifier.

Digital Signal Amplifier, Type 4620A2

- For static/dynamic measurements up to 200 Hz
- Accurate temperature output from the sensor
- External zero tare function
- Digital inputs and outputs, limit switches
- Outputs parametrizable
- Serial interfaces RS-232C/RS485
- Output 4...20 mA/0...10 V

Analog Signal Amplifier, Type 4618A...

- High sampling rate
- With analog compensation
- 2 adjustable limit contacts
- Temperature output (option)

Description

RH transducers are usually used in conjunction with an appropriate signal amplifier. These amplifiers provide the constant current supply to the transducer. Their main function is the amplification from the mV signal of the transducer to an industrial signal standard like 4 ... 20 mA , 0 ... 10 V or digital interfaces such as RS-232C or RS485 and to compensate for linearity and thermal drift.

A typical measuring system consists of a transducer, a connecting cable and a signal amplifier. The choice of the different amplifiers determines the possible accuracy of measurement.

Application

The RH-series transducers are used for a wide range of different applications in hydraulics and process control. The selection between both measuring chains depends on the application.

Examples for Type 4620A2:

- Static and low dynamic pressure measurement
- accurate pressure measurement over a large temperature range
- High precision pressure and temperature measurement
- Precision instruments and laboratory devices

Examples for Type 4618A...:

- High dynamic pressure applications
- Pressure measurement within a narrow temperature range

Technical Data

Digital Compensation with Amplifier, Type 4620A2

Specifications for all pressure ranges

Type RH...		...B01...	...B02...	...B05...	...B10...	...B20...	...B30...
Range	bar abs	0 ... 100 ²⁾	0 ... 200 ²⁾	0 ... 500	0 ... 1 000	0 ... 2 000	0 ... 3 000 ³⁾
Data points pressure	%FS	0	25	50	75	100

For other technical data consult data sheet to Type 4618A... (4618A_000-293)

¹⁾ Values for standard compensated temperature range

²⁾ 100 bar and 200 bar types only supplied with amplifier 4620A

³⁾ For a safe operation of the sensor, precautions must be taken to select the type of sensor and corresponding gasket/seal according to the measured medium, pressure and temperature ranges

For transducers with pressure ranges >2 000 bar /30 000 psi the operating temperature is limited to 225 °C/440 °F

⁴⁾ Model behavior (calculation of digital compensation) at data points selected by Kistler.

For other technical data related to digital compensation of silicon pressure sensors consult data sheet FAQ3_000-280

For further technical information regarding the built-in measuring element please refer to the data sheet of the OEM sensor Type RHU50 (RHU50_000-085).

Mounting Torque

RHU50:	30 N·m
RHU56/RHM16:	35 N·m

Accessories included

- None

Optional Accessories

- | | |
|---|---------------|
| • Gasket ø10/8x1 mm for RHU50 | Type/Art. No. |
| • Output cable for Type 4620A... | 1100A13 |
| (14 poles, 5 m) | 1477A5 |
| • Mating connector for RH-transducer | 1500A87 |
| (for temperatures up to max. 120 °C) | |
| • PC-Software to Type 4620A2, incl. | 4795B |
| connection cable to PC | |
| • High temp. cable (incl. connector) | 4790AxQ01 |
| 180 °C, x = length m, see standard cables | |

Scope of Supply

RH measuring systems are assembled and calibrated on order. For mounting, electrical connection and safe operation please refer to the instruction manual.

Spare sensors are delivered with the corresponding information either polynomial coefficients on disc for the Type 4620 digital amplifier or calibration plug Type 4958A0 for the analog amplifier Type 4618 (existing amplifier to be specified on order).

Ordering Key**Bold text** = standard types**Front**

Notes for Appendix D9 ³⁾:

Selection

Parameter		Standard settings	Customized Values	Option minimum	Option maximum
Output	active	4 ... 20 mA		4 ... 20 mA	0 ... 10 V
Adjusted pressure range [bar/psi]	low	0		0	40 % FS ⁵⁾
	high	FS ⁴⁾		60 % FS ⁵⁾	FS
Pressure switching point %FS [% of span of adj. pressure range]	low	10		0	80
	high	90		20	100

¹⁾ Temperature output signal of amplifier Type 4620A2 for analog output signal²⁾ For other standard default settings of Type 4620A2 consult data sheet 4620A2_000-199³⁾ The technical data are based on the pressure range listed in the ordering code⁴⁾ FS corresponds to the value specified in the ordering code⁵⁾ The range lower and upper adjusted pressure should be at least 50 %FS

Ordering example

measuring chain: RHU50 B05S D22

Measuring system with sensor Type RHU50, 500 bar abs., standard comp. temperature range, with amplifier Type 4620A2 (standard setting) and cable Type 4790A2

Ordering example

spare sensor: RHU50 B05S D

Sensor Type RHU50, 500 bar abs., standard compensation, standard temperature range, no amplifier and no cable but including polynomial coefficients on disc for amplifier Type 4620

RHU50 B05S A

Sensor Type RHU50, 500 bar abs., standard compensation, standard temperature range, no amplifier and no cable but including calibration plug Type 4958A0 for amplifier Type 4618A0 (Amplifier Type 4618A2 and Type 4618A4 must be calibrated in the factory)
