

# K-Shear® Accelerometer

Type 8730A...

## Miniature, Stud Mount, Voltage Mode Accelerometer

Small, 1,9 gram weight general purpose accelerometer for vibration measurements in wide range of applications. Available with an integral 5-40 UNC mounting stud (Type 8730AE500: M3), this light weight hermetically sealed accelerometer features a wide frequency response.

- Low impedance voltage mode
- Quartz shear sensing element
- Ultra-low base strain sensitivity
- Minimal thermal transient response
- Ground isolated version available
- Conforming to CE

### Description

The light weight, Type 8730A... accelerometer series uses Kistler's uniquely designed K-Shear quartz sensing element. Operating in the shear mode with precisely cut quartz plates, allows the accelerometers to exhibit ultra low sensitivity to thermal transients, base strain and transverse motion. Housed in a hermetically sealed titanium case, the quartz sensing elements afford excellent long-term stability that ensures repeatable and accurate measurements.

The standard Type 8730A... and the low temperature 8730A500M8 accelerometer weighs only 1,9 grams while the M1 version which is slightly larger and "off-ground" weighs 2,5 grams. Internal microelectronic Piezotron® signal conditioning circuit converts the charge developed in the quartz element as a result of the accelerometer being subjected to a vibration, into a useable high level voltage signal at a low impedance output. The low impedance output provides high immunity to noise and insensitivity to cable motion. Kistler's design allows the use of rugged, low cost coaxial cable between the accelerometer and power/readout equipment. Where minimum cable and connector weight are desirable, Type 1761B... general purpose cable is recommended.

### Application

The light weight and small size of Type 8730A... series is recommended for precision measurements on small, thin-walled structures or where space is limited. Changes in dynamic response of the test article due to accelerometer mass loading are minimize when using this family of accelerometers. It is ideal for high frequency vibration measurements.

### Mounting

Type 8730A... can be attached to the test structure by its integral 5-40 stud. Reliable and accurate measurements require that the mounting surface be clean and flat. The instruction manual for Type 8730A... accelerometer series provides detailed information regarding mounting surface preparation.
