THERMOPILE INFRARED SENSOR

Date : Oct. 10, 2000

■ Features

The thermopile sensor consists of a series of 44 thermoelements, forming a sensitive area of $0.5 \times 0.5 \text{ mm}^2$. The sensor is hermetically sealed into a TO-18 metal housing, with optical filter. This standard filter allows measurements to be made in the spectral range above $5 \mu\text{m}$ wavelength. The thermosensor exhibits an almost white noise, comparable to an ohmic resistance. It has a constant signal versus frequency up to its frequency limit, and is directly proportional to incident radiation.

■ Applications

- * Ear thermometers; clinic thermometers
- * Infrared thermometers
- * Consumer applications: hair dryer, micro-wave oven, air conditioner, refrigerator
- * Continuous temperature control of manufacturing
- * Security system
- * Radiation monitor switch system
- * Absorbing measurement for gas analysis
- * Thermoelectric converter
- * Heat flux flowmeter

■ **Order information : OTC-238-A**

- A : 1 : standard filter (5-14 μ m)
- 2 : silicon filter with flat band transmission

■ **Transmission of filter**

Transmission of optical filter is measured by FTIR from 2 μ m

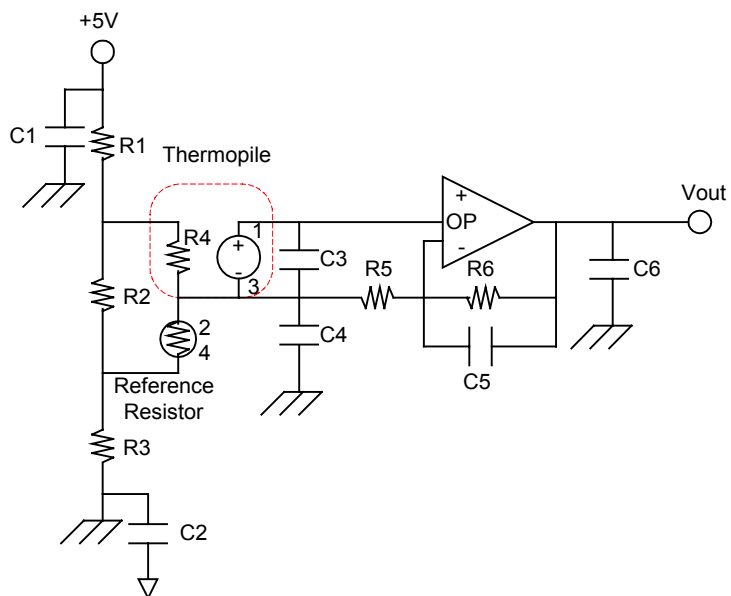

■ **Package**

The sensor is hermetically sealed into a TO-18 metal housing, with optical filter. This standard filter allows measurements to be made in the spectral range above 5 μ m wavelength. The dimensions of header and cap are shown below.
