

## GENERAL DESCRIPTION

SUNSTAR单片机专用电路 <http://www.icasic.com/> TEL: 0755-83387030 FAX:0755-83376182 E-MAIL:szss20@163.com

The **SDL7942** a single chip keyboard encoder developed for IBM PC AT, IBM PS2 and compatible machine keyboard.

The device detects the key press and release activity, sends the scan code to system, and accepts the command from system.

A high performance, low cost keyboard can be achieved by using the DL7942 with the minimal external components.

## FEATURES

- Support scan code set 1, 2 and 3.
- Support PC AT and PS/2 keyboard.
- 104/107 keys with with multi media or other special application keyboard encoder.
- Support WINDOWS95, 98, 2000 keys.
- IBM PC AT or compatible machine keyboard
- IBM PS/2 model 30, 50, 60, 80 or compatible machine keyboard.
- Phantom key detects.
- Built-in RC oscillator with external resistor.
- Internal pull-up resistor for inputs.
- Tri-state outputs.
- Low power CMOS device technology.

## APPLICATION

### PIN DESCRIPTION

PIN NO	Pin Name	Direction	Function description
1	GND	POWER	Negative power supply pin
2	OSCO	O	Clock output
3	DATA	I/O	Data line of serial port
4	CLK	I/O	Clock line of serial port,
24, 5, 6, 11~15, 22, 23, 21, 19, 18, 17, 16, 20, 25, 26	C0~C17	O	Keyboard matrix scanning output pins
27~34	R0~R7	I	Keyboard matrix scanning input pins
7, 8, 9, 10	NC	-	No connection
35	SCRL	O	Scroll Lock indicator
36	NUM	O	Num Lock indicator
37	CAPS	O	CAPS lock indicator
38	NC	TEST	--
39	VDD	POWER	Positive power supply pin
40	OSCI	I	External oscillator resistor connection pin

## FUNCTION DESCRIPTIONS

The DL7942's main function is to detect key press and release activity and to transmit the corresponding scan code, as well as make and break codes to the system. The device also accepts commands from the system. The communication between the keyboard and the system is realized via a serial port consists of CLOCK and DATA pins.

## Power-on-reset and self-test

The power-on-reset (POR) occurs first when power is applied to the keyboard. The duration of POR is 150ms~2s. After POR, the self-test BAT (Basic Assurance Test) happens, it takes 300ms~500ms.

The following activities take place in BAT:

- 1) Turns on LED indicators at the beginning.
- 2) Test.
- 3) Turns off LED indicators at the end
- 4) Send the result to the system.

A completion code AA is send to the system if BAT is successful. an error code is if BAT fails. BAT takes 300ms-500ms the completion codes are send 450ms-2.5s after POR, and 300ms~500ms after RESET command is acknowledged.

## Keyboard buffer

An FIFO is used to buffer the received scan code.

- 1) The buffer is 16-byte
- 2) Respond codes, i.e FA and repeated codes isn't be buffered.  
Additional keystroke is discarded.

## Command description

### Command from the system

Reset—FF(hex)

- Send ACK to system
- Checks clock and data limes-Reset in the high state for at least 500ms or receives another command.
- Default to scan code set 2.

Resend—FE(hex)

- Sends the previous code again. If the previous code is RESEND, the last code before RESEND will be send .

Set Key Type-FB, FC, FD (hex)

- Keyboard responds with ACK
- Clears output buffer
- Receivers key ID byte
- Receivers ACK
- Sets key ID type (affect only scan code set 3 operation).

FB: Typematic

FC: Make/Break

FD: Make

- Returns to previous scanning rate.

Set All Keys-F7, F8, F9, FA(hex)

- Sends ACK to the system
- Clears output buffer.

- Sets all key type to the type specified by the command (affect only scan code set 3 operation).

F7: Typematic

SUNSTAR单片机专用电路 <http://www.icasic.com/> TEL: 0755-83387030 FAX:0755-83376182 E-MAIL:szss20@163.com

F8: Make /Break

F9: Make

FA: Typematic /Make/Break

- Returns to previous scanning rate.

#### Set Default - F6(hex)

- Sends an ACK to system
- Resets all conditions to power-on state
- Clears the output buffer
- Set the default key type(scan code set 3 only).
- Set the default typematic rate/delay.

#### Default Disable-F5(hex)

- Sends an ACK to the system.
- Resets all condition to power-on state.
- Clears the output buffer.
- Sets the default key type (scan code set 3 only).
- Set the default typematic rate/delay.
- Clear last typematic key.
- Stops scanning and wait for commands

#### Enable-F4(hex)

- Sends and ACK to the system
- Clears the output buffer.
- Clears the last typematic key.
- Start scanning

#### Set Typematic Rate/Delay –F3(hex)

- Sends an ACK to the system.
- Receivers rate/delay value byte
- Sends and ACK to the system.
- Set rate/delay.
- Returns to previous scanning state.

Note:

1. Repeat period= $(8+A) \times (2B) \times 0.00417s$ 
  - A. Binary value of bits 2, 1, and 0.
  - B. Binary value of bits 4 and 3.
2. Delay= $(C+1) \times 250ms$

A. Binary value of bits 6 and 5.Bit 7 is always 0

Typematic rate	Typematic rate	Typematic rate	Typematic rate
00000	30.0	10000	7.5
00001	26.7	10001	6.7
00010	24.0	10010	6.0
00011	21.8	10011	5.5
00100	20.0	10100	5.0
00101	18.5	10101	4.6
00110	17.1	10110	4.3
00111	16.0	10111	4.0
01000	15.0	11000	3.7
01001	13.3	11001	3.3
01010	12.0	11010	3.0
01011	10.9	11011	2.7
01100	10.0	11100	2.5
01101	9.2	11101	2.3
01110	8.6	11110	2.1
01111	8.0	11111	2.0

3.Default rate=10.9 chars/sec+20%

Default delay =500ms±20%

Read ID-f2 (hex)

- Sends an ACK to the system
- Discontinues scanning.
- Sends two ID bytes. The second byte will be sent within 500 us after first byte.
- Resumes scanning.

Select Alternate Scan Codes-F0(hex)

- Sends an ACK to the system.
- Clears the output buffer.
- Sets the default typematic rate/delay.
- Clears last typematic key.
- Receives option byte.
- Sends an ACK to the system.
- Option byte=
  - 01: scan code set 1
  - 02: scan code set 2
  - 03: scan code set 3
- Returns to previous scanning rate.

Invalid commands-EF, F1(hex)

- Returns a RESEND command.
- Returns to previous scanning state

.Echo-EE (hex)

- Sends an EE (hex) to the system.
- Return to previous scanning state.

Set status indicators-ED (hex)

- Sends an ACK to the system.
- Receives option byte.
- Sends an ACK to the system.
- Updates status Indicators.
- Returns to previous scanning state.

### **Command to the system**

Acknowledge- FA(hex)

If the keyboard receives an valid command from the system, an ACK Will be send back to the system, except that the command received is RESEND or ECHO.

BAT Completion Code-AA (hex)

This command is sent to system after successful completion of keyboard BAT.

Buffer overrun 00, FF (hex)

If keyboard buffer overflows, The last byte in the buffer will be replace by 00 or FF.

Scan code set 1-FF,

Scan code sets 2 and 3-00.

Resend –FE(hex)

This command is send to the system after the keyboard receives an invalid code or any incorrect parity.

Echo-EE (hex)

This command is send to the system after the keyboard receives an invalid code or any incorrect parity.

Echo-EE(hex)

This command is send to the system after the keyboard receives an ECHO command.

Keyboards ID –83AB (hex)

The 2-byte ID is send to the system after receives READ ID command. The low byte is sent fist, then high byte is sent.

## Data Communication via Serial Port

Data output SUNSTAR单片机专用电路 <http://www.icasic.com/> TEL: 0755-83387030 FAX:0755-83376182 E-MAIL:szss20@163.com

The keyboard first checks the CLK and DATA lines. If both of them are high, that means data transmission from keyboard to the system is permitted, then keyboard starts to clock data out. Data will be valid before the trailing edge and after the leading edge. The keyboard checks the clock line at least every 60us. If the clock line is lowered before the leading edge of the 10<sup>th</sup> clock, the keyboard should stop sending, and set both data line and clock line to high.

### .Data input

The system checks the CLK line first. If the keyboard is not sending data or it is sending data but has not reached the 10<sup>th</sup> clock, the system can force the clock line low for more than 60us and prepares to send data.

The keyboard checks clock line status at intervals of no more than 5ms. If a system-request-to-send (RTS) is detected, the keyboard clocks 11 bit in. After the 10<sup>th</sup> bit, the keyboard checks the data line. If the data line is high, the keyboard pulls it low and clocks one more bit to signal the system that data has been received.

If data is low after the 10<sup>th</sup> bit, a frame error occurs. When a frame error occurs, the keyboard should continue to count until data line goes high, then pulls it low and sends a RESEND command to the system.

## Keyboard Scan Code Table

The keyboard supports 3 scan code sets. When a key is pressed down, its make scan code is sent to the system. When the key is released, its break code is sent. If two or more keys are held down, only the last key pressed repeats at the typematic rate. Typematic operation stops when the last pressed key is released

### Scan code set 1

## 概述:

SUNSTAR单片机专用电路 <http://www.icasic.com/> TEL: 0755-83387030 FAX:0755-83376182 E-MAIL:szss20@163.com

SDL7942是标准 PS/2 键盘控制芯片。它可以完成扫描键盘，发送键码，与电脑通信并控制指示灯等到全部功能，是使键盘达到高性能，低成本，最少外围元器件的最佳选择方案。

## 特点:

支持 Scan code set 1, 2, 3。

支持 PC AT and PS/2 键盘。

支持 104/107 键，并支持多媒体及其它特殊功能键。

支持 WINDOWS95/98, 2000 及 NT 等操作系统。

## 管脚概述:

管脚号	管脚名	I/O	功能描述
1	GND	POWER	电源“-”极
2	OSCO	O	振荡输出
3	DATA	I/O	串口通信数据线
4	CLK	I/O	串口通信时钟线
24, 5, 6, 11~15, 22, 23, 21, 19, 18, 17, 16, 20, 25, 26	C0~C17	O	键盘扫描输出脚
27~34	R0~R7	I	键盘扫描输入脚
7, 8, 9, 10	NC		不用
35,	SCRL	O	Scroll Lock 指示灯控制脚
36	NUM	O	Num Lock 指示灯控制脚
37	CAPS	O	Caps Lock 指示灯控制脚
38	NC	TEST	--
39	VDD	POWER	电源“+”极
40	OSCI	I	振荡输入脚（连外部振荡电阻）

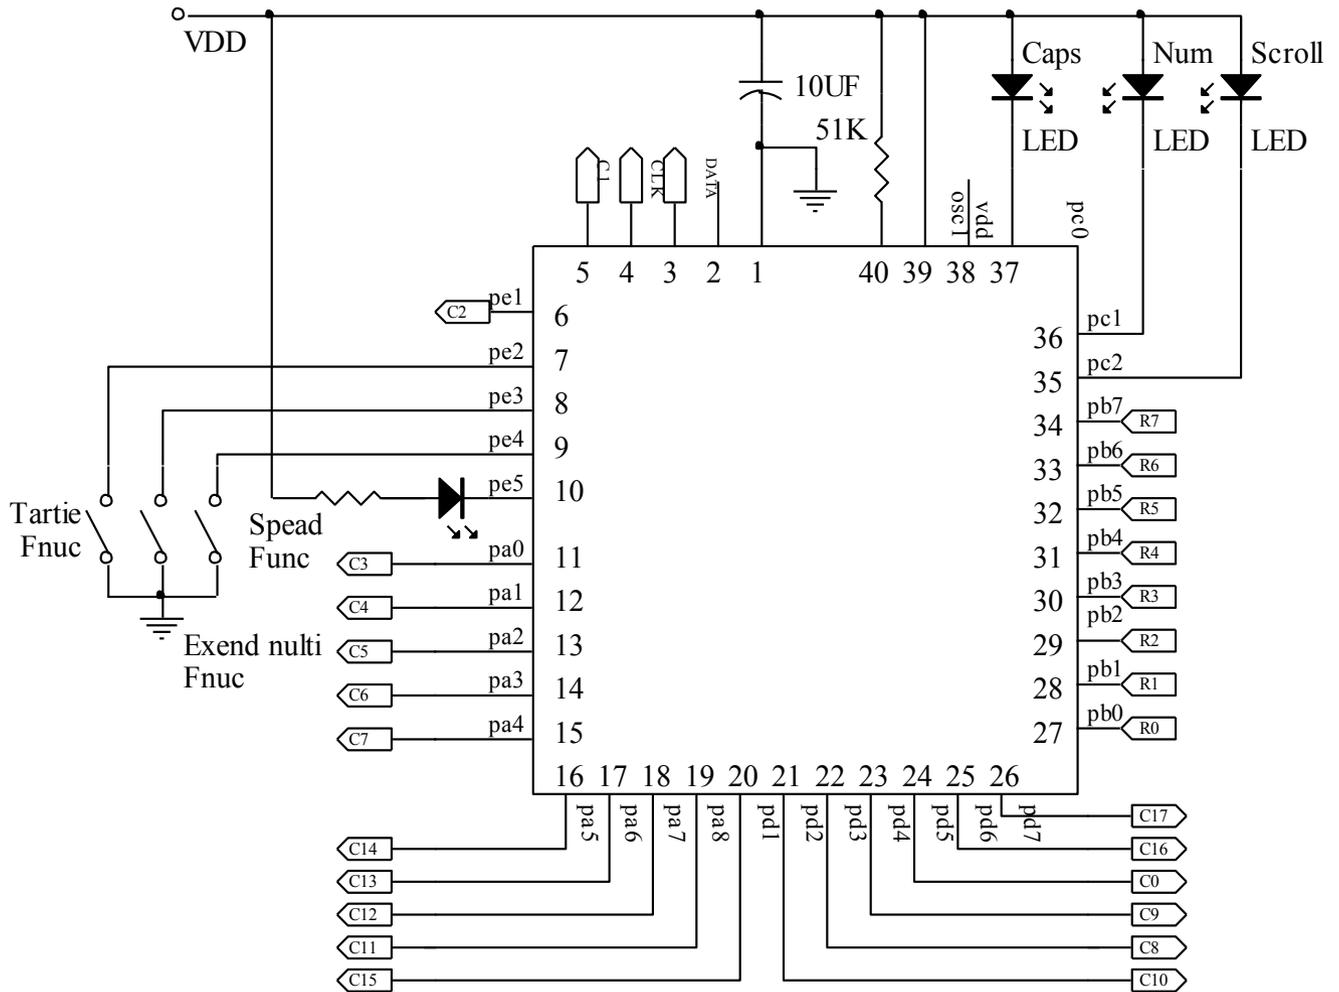

## 极限工作标称值

工作温度————— 0~70 摄氏度

存储温度————— -50~150

电源电压————— 4.5V~5.5V

输入电压————— -0.3V~+6V
