## Safety instructions

### Use in accordance with the regulations

Force transducers of types Z4A and Z4A-G are used for high-precision force measurements and for force reference measurements (transfer standard). Use for any additional purpose shall be deemed to be **not** in accordance with the regulations.

In the interests of safety, the transducer should only be operated as described in the Mounting Instructions. It is also essential to observe the appropriate legal and safety regulations for the application concerned during use. The same applies to the use of accessories.

The transducer is not a safety element within the meaning of its use as intended. Proper and safe operation of this transducer requires proper transportation, correct storage, assembly and mounting and careful operation and maintenance.

### General dangers due to non-observance of the safety instructions

The Z4A, Z4A-G force transducer corresponds to the state of the art and is fail-safe. The transducers can give rise to residual dangers if they are inappropriately installed and operated by untrained personnel.

Everyone involved with the installation, commissioning, maintenance or repair of a force transducer must have read and understood the Mounting Instructions and in particular the technical safety instructions.

### Residual dangers

The scope of supply and performance of the transducer covers only a small area of force measurement technique. In addition, equipment planners, installers and operators should plan, implement and respond to the safety engineering considerations of force measurement technique in such a way as to minimise residual dangers. Prevailing regulations must be complied with at all times. There must be reference to the residual dangers connected with force measurement technique.

In these mounting instructions residual dangers are pointed out using the following symbols:

Symbol: **DANGER**

*Meaning: Highest level of danger*

Warns of a **directly** dangerous situation in which failure to comply with safety requirements **will** lead to death or serious physical injury.

Symbol: **WARNING**

*Meaning: Dangerous situation*

Warns of a **potentially** dangerous situation in which failure to comply with safety requirements **can** lead to death or serious physical injury.

Symbol: **ATTENTION**

*Meaning: Possibly dangerous situation*

Warns of a **potentially** dangerous situation in which failure to comply with safety requirements **could** lead to damage to property, slight or moderate physical injury.

Symbol: **NOTE**

Refers to the fact that important information is being given about the product or its use.

Symbol: **CE**

*Meaning: CE mark*

The CE mark signals a guarantee by the manufacturer that his product meets the requirements of the relevant EC directives (see Declaration of conformity at the end of this document).

## **Prohibition of own conversions and modifications**

The transducer must not be modified from the design or safety engineering point of view except with our express agreement. Any modification shall exclude all liability on our part for any damage resulting therefrom.

## **Qualified personnel**

These transducers are only to be installed by qualified personnel strictly in accordance with the specifications and with the safety rules and regulations which follow. It is also essential to observe the appropriate legal and safety regulations for the application concerned. The same applies to the use of accessories.

Qualified personnel means persons entrusted with the installation, fitting, commissioning and operation of the product who possess the appropriate qualifications for their function.

## **Conditions on site**

Protect the transducer from damp and weather influences such as rain, snow, etc.

## **Maintenance**

The Z4A, Z4A-G force transducer is maintenance free.

## **Accident prevention**

Although the specified nominal force in the destructive range is several times the full scale value, the relevant accident prevention regulations from the trade associations must be taken into consideration.

## 1 Scope of supply

- Z4A force transducer or
- Z4A-G force transducer<sup>1)</sup> including DKD certificate<sup>2)</sup> (class 00 / class 05 for measuring range 500kN under DIN EN 10002-3 or ISO / FDIS 376)
- Z4A, Z4A-G Operating Manual

<sup>1)</sup> Z4A-G is only available from HBM in conjunction with a DKD calibration according to EN10002-3.

<sup>2)</sup> The calibration certificate must be ordered separately (see accessories).

### Accessories (not included in the scope of supply)

- DKD calibration certificate according to EN10002-3 order no. K-CAL-FD

- ZKM tensile force introduction

|           |                          |
|-----------|--------------------------|
| for 20kN: | Order no. 1-Z4/20kN/ZKM  |
| 50kN:     | Order no. 1-Z4/50kN/ZKM  |
| 100kN:    | Order no. 1-Z4/100kN/ZKM |
| 200kN:    | Order no. 1-Z4/200kN/ZKM |
| 500kN:    | Order no. 1-Z4/500kN/ZKM |

- ZDK compressive force introduction

(recommended for standard measurements in industry)

|           |                          |
|-----------|--------------------------|
| for 20kN: | Order no. 1-Z4/20kN/ZDK  |
| 50kN:     | Order no. 1-Z4/50kN/ZDK  |

| EDO4/200kN | Order no. | 3-9219.0721 |
| EDO4/500kN | Order no. | 3-9219.0722 |

## 2 Application information

### Z4A force transducer:

Precision force transducers of the Z4A type series measure tensile forces and compressive forces.

They measure static and quasi-static forces with great accuracy and reproducibility and therefore require judicious handling. You must take particular care when transporting and installing the devices. If you knock or drop the transducers, this could permanently damage them.

### Z4A-G force transducer with DKD certificate from HBM:

Force transducer calibrated with guaranteed class 00 (20kN – 200kN) and 05 (500kN) according to DIN EN10002-3 or ISO / FDIS 376.

The transducers are calibrated as standard **in the tensile force direction**. On request, however, they can also be calibrated in the compressive force direction, under the DKD.

The limits for the permissible mechanical, thermal and electrical stresses are stated in the Specifications. Be sure to allow for them when planning the measuring setup, when installing and lastly, when operating.

## 3 Structure and mode of operation

### 3.1 Measuring body

The measuring body comprises a system of measuring springs with 8 applied strain gauges (S.G.). The strain gauges are arranged so that four of them are extended and the other four are upset when a force acts on the transducer.

For the introduction of tensile forces, the Z4A and Z4A-G transducer has a crowned threaded pin at the top (also suitable for the introduction of compressive forces) and a tapped hole at the bottom.

## 3.2 Housing

The enclosure with the integrated system of measuring springs is hermetically sealed at the top and at the bottom by metal membranes, so that moisture cannot damage the sensitive application.

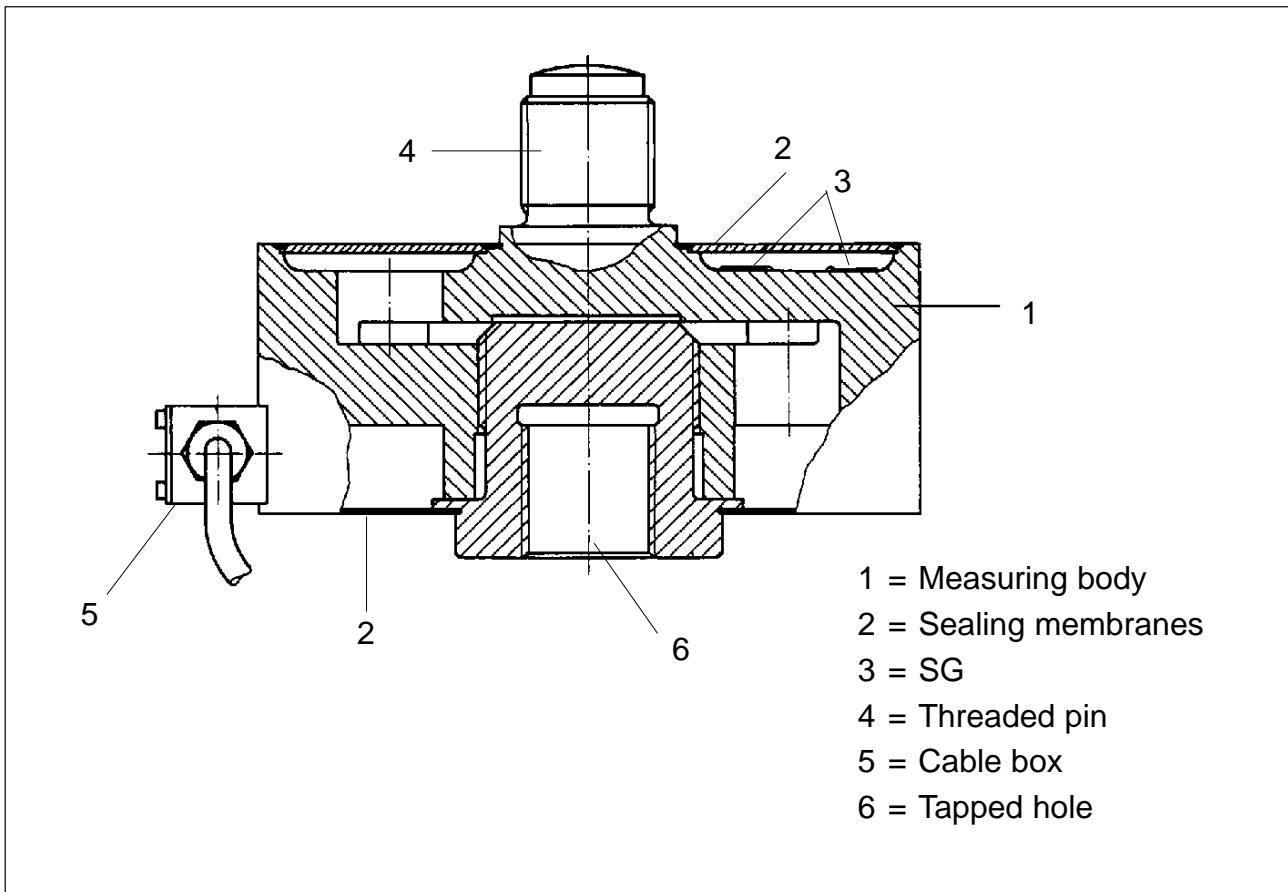

Fig.3.1 Z4A, Z4A-G (20kN...500kN)

## 3.3 Disturbance variables

Torsion, bending and transverse load are disturbance variables and are therefore to be avoided. If necessary they can be remedied with HBM mounting accessories (section 5.3 ).

The effects of temperature on the zero signal (S/G bridge and housing) and on the sensitivity are compensated.

Changes in the ambient pressure act as additive (subtractive) forces. These are scarcely of importance when compared with large nominal loads.

## 4 Conditions on site

### 4.1 Ambient temperature

The effects of temperature on the zero signal and on the sensitivity are compensated. To achieve optimal measurement results the nominal temperature range must be maintained. Temperature-induced measurement errors can be caused by heating (for example radiant heat) or cooling on one side. A radiation shield and all-round heat insulation bring about marked improvements. They must not form a force shunt.

### 4.2 Moisture

Extreme humidity or a tropical climate should be avoided if this means that the classified limit values are exceeded (degree of protection IP67 under DIN EN 60529).

### 4.3 Air pressure

Changes in air pressure affect the force transducer in the same way as a change in force. In the case of normal changes in ambient pressure  $\pm 20\text{mbar}$ , however, the effect on the measurement signal is negligible (changes in air pressure of  $\pm 10\text{mbar}$  only have an effect on the zero signal of 6N for 20kN and 50kN transducers).

### 4.4 Chemical effects

The steel housing of the transducers is protected by a powder coating. If used in difficult environmental conditions (direct weather effects, contact with media which encourage corrosion) additional protective measures should be employed by the user. The unit can be painted with commercial protective paint or a tar-based coating (underseal). The sheath of the connection cable is made of silicon rubber.

The uncoated force introduction areas are greased to provide protection against corrosion.

## 5 Mechanical installation

### 5.1 Important measures for installation

- treat the transducer gently
- if measuring compressive forces, make sure there is a solid support structure
- the force-introduction surfaces must be scrupulously clean and carry in full
- keep to the depths of engagement for threaded rods or knuckle eyes
- do not overload the transducer.

#### WARNING

If there is a risk of breakage through overload on the transducer and thus a risk to persons, additional safety measures are to be taken.

### 5.2 General installation guidelines

The measurement direction in which forces act on the transducer must be as precise as possible.

#### WARNING

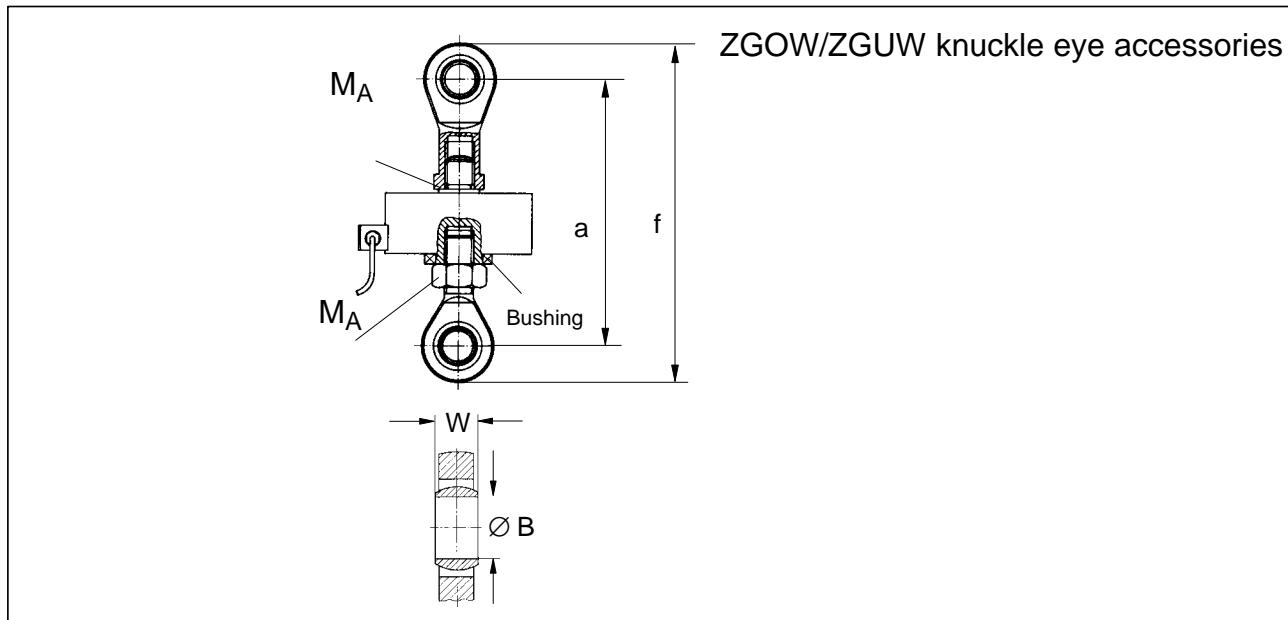

Torsion and bending moments, eccentric loading and transverse forces result in measurement errors and if limit values are exceeded, could destroy the transducer.

### 5.3 Mounting accessories for tensile loading/ compressive loading

Knuckle eyes are provided for Z4A installation. This mounting accessories prevent the introduction of torsional moments and when 2 knuckle eyes are used, stop bending moments and transverse and angular loading being introduced in the transducers. The knuckle eyes are intended primarily for static tensile and compressive loading of the transducer.

## Installing knuckle eye, ZKM and threaded adapters:

- Screw the knuckle eye thread into the transducer's inside thread until it reaches the stop, then loosen it by one turn.
- With Z4A/500kN in addition: turn the knuckle eye to align the bushing holes with the knuckle eye apertures.

| Type       | upper knuckle eye<br>lower knuckle eye | Weight<br>(kg) | a   | f   | W  | ØB                              | M <sub>A</sub> (Nm) |
|------------|----------------------------------------|----------------|-----|-----|----|---------------------------------|---------------------|
| Z4A/20 kN  | Z4/20kN/ZGOW<br>Z4/20kN/ZGUW           | 0.2            | 158 | 198 | 21 | 16 <sup>H7</sup>                | 120                 |
| Z4A/50 kN  | U2A/2t/ZGOW<br>U2A/2t/ZGUW             | 0.8<br>0.4     | 184 | 234 | 25 | 20 <sup>H7</sup>                | 350                 |
| Z4A/100 kN | Z4/100kN/ZGOW<br>Z4/100kN/ZGUW         | 1.1            | 251 | 322 | 37 | 30 <sup>H7</sup>                | 950                 |
| Z4A/200 kN | U2A/10t/ZGOW<br>U2A/10t/ZGUW           | 3.2<br>1.1     | 352 | 475 | 35 | 50 <sup>+0.001<br/>+0.014</sup> | 2000                |
| Z4A/500 kN | Z4/500kN/ZGOW<br>Z4/500kN/ZGUW         | 17.3<br>12.0   | 570 | 764 | 44 | 60 <sup>+0.003<br/>+0.018</sup> | 4000 <sup>1)</sup>  |

<sup>1)</sup> underside secured with 2 screws to prevent rotation; for pin end with outside thread only

For **dynamic loading**, Z4A transducers must be installed without play. Knuckle eyes only have limited applicability for dynamic loading, as with dynamic alternating stress, the pivoting bearings increase their bearing clearance, thus falsifying the measured value. With the increased load cycle, there is a risk that the knuckle eyes could be destroyed. For this type of loading, we recommend using flexible tension bars or pressure bars.

To install the transducers without play, they must be sufficiently prestressed and locked with the mounting accessories (knuckle eyes, tension bars or pressure bars).

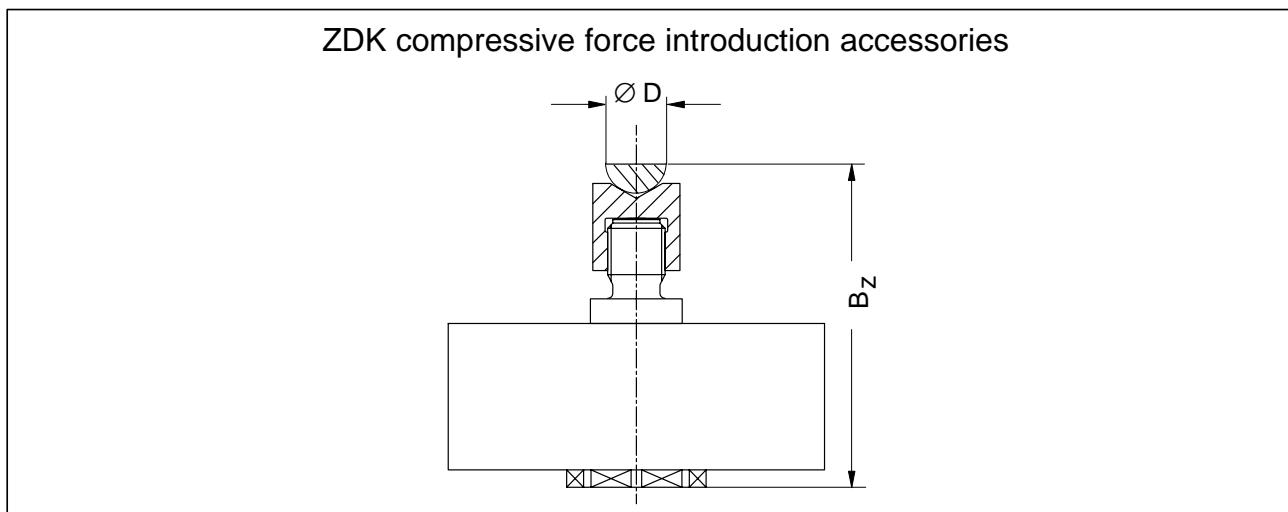

Do not use less than the starting torques  $M_A$  recommended in the table overleaf, which should be routed through the transducer, in non-positive contact.

When locking, make sure that the transducer signal changes by no more than 0.1%.

In the case of transducers with nominal forces 20kN..100kN, you can also lock as follows for tensile loading:

- screw in knuckle eyes
- load transducer with 10..20% of the nominal force
- tighten the lock nut of the lower knuckle eye

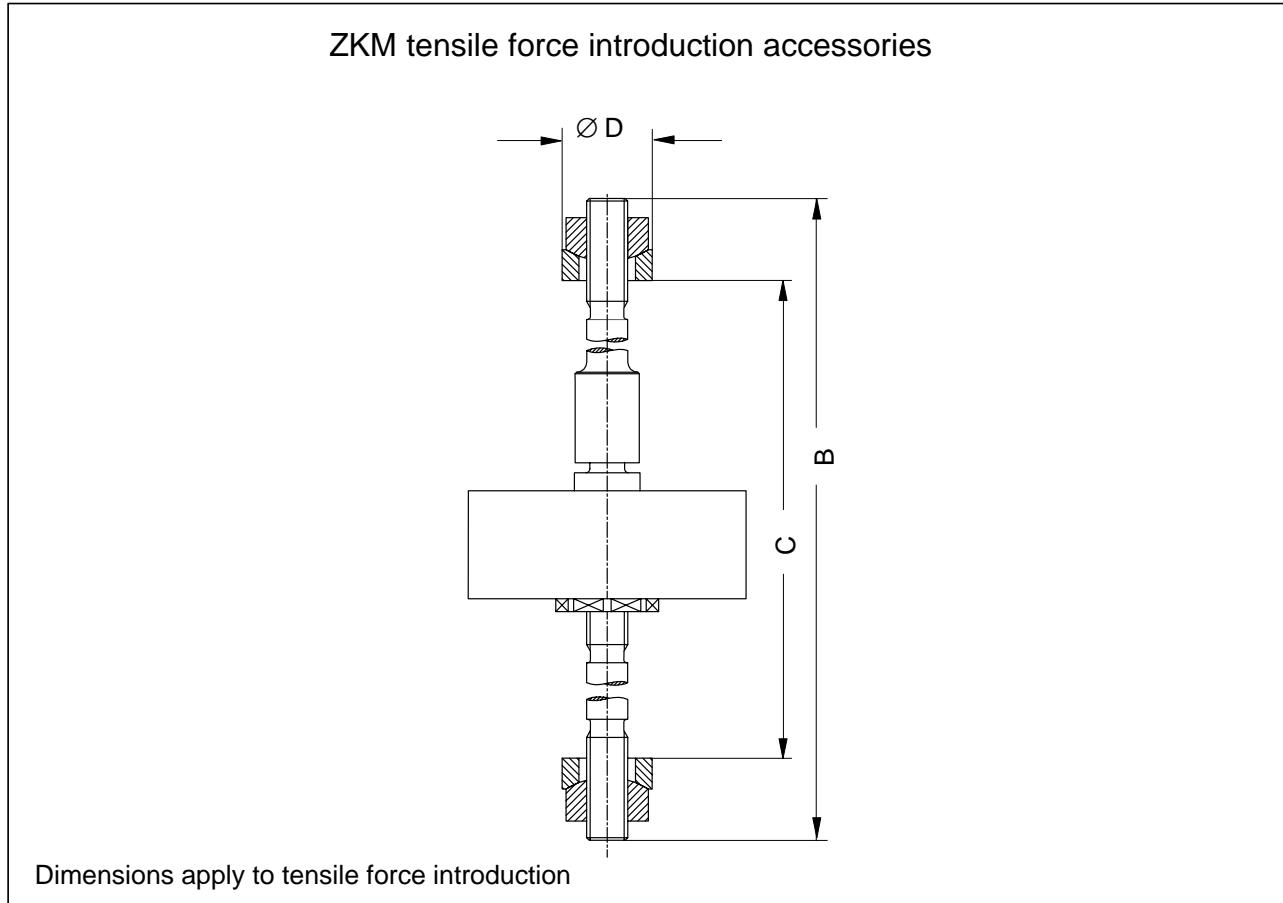

**Static loading** can also – in addition to using knuckle eyes – be carried axially to the transducer through hardened (40...44HRc) pressure plates that have been given a plane-parallel surface. The transducer support structure must also have an inflexible, hardened and plane-parallel surface. We recommend ZDK compressive force introduction parts for *standard measurements* in industry.

| Type      | ZDK accessories | Weight [kg] | B <sub>Z</sub> | Ø D<br>-0.1<br>-0.3 |
|-----------|-----------------|-------------|----------------|---------------------|
| Z4A/20kN  | Z4A/20kN/ZDK    | 0.10        | 99             | 20                  |
| Z4A/50kN  | Z4A/50kN/ZDK    | 0.18        | 111            | 25                  |

| Z4A/200kN | Z4A/200kN/ZDK   | 1.26        | 200            | 50                  |
| Z4A/500kN | Z4A/500kN/ZDK   | 5.80        | 365            | 80                  |

## ZKM force introduction part for precision measurement, for example DIN EN10002-3-calibrations

For use as a transfer standard or control standard for the Z4A, Z4A-G force transducer, we recommend using ZKM force introduction parts according to DIN EN 10002-3 or ISO/FDIS376.

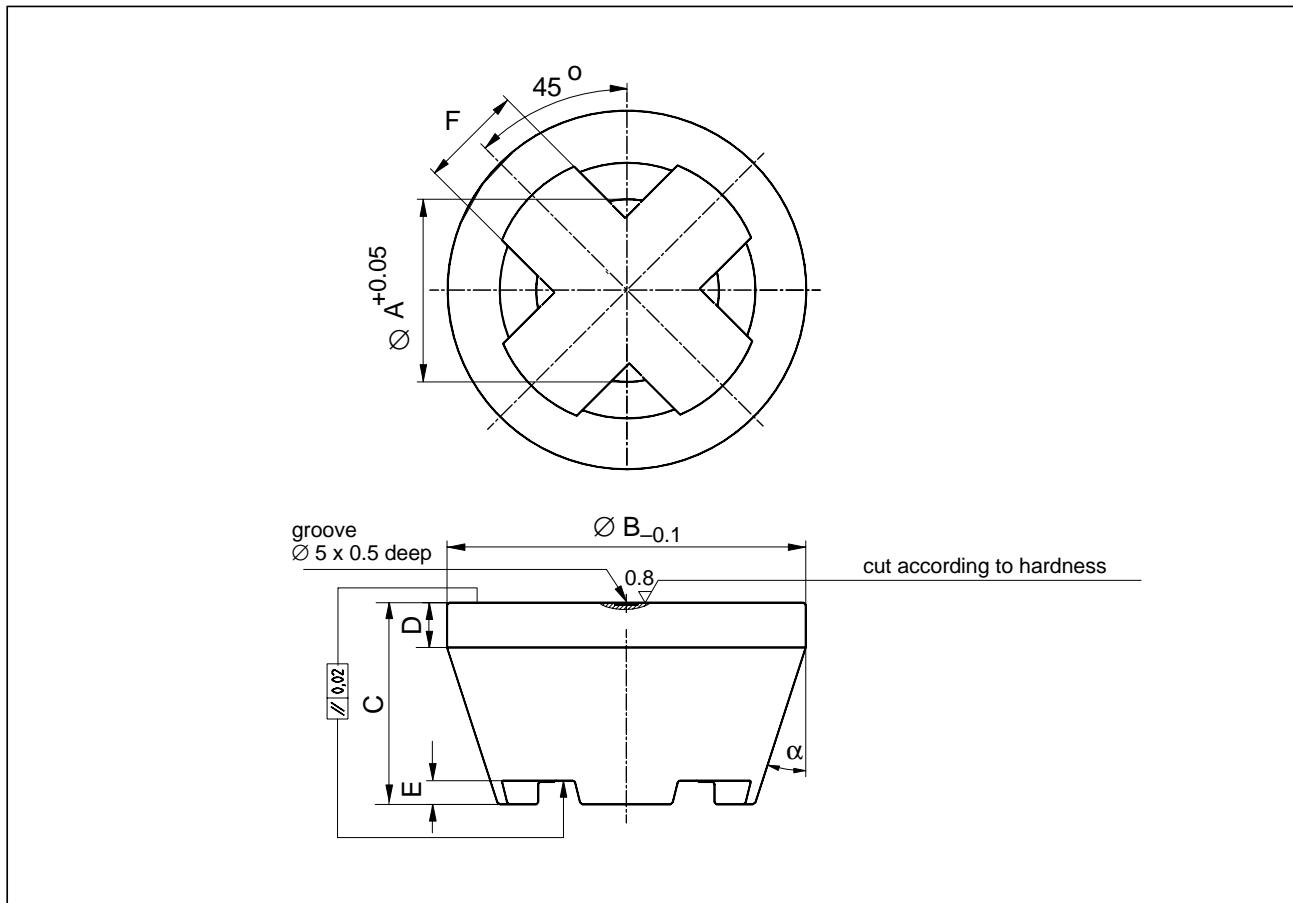

| Type      | ZKM accessories | Weight (kg) | B   | min | C   | max | $\varnothing$ D                        |
|-----------|-----------------|-------------|-----|-----|-----|-----|----------------------------------------|
| Z4A/20kN  | Z4A/20kN/ZKM    | 0.82        | 325 | 228 | 276 |     | 35 <sup>-0.120</sup> <sub>-0.280</sub> |
| Z4A/50kN  | Z4A/50kN/ZKM    | 1.45        | 350 | 248 | 299 |     | 45 <sup>-0.130</sup> <sub>-0.290</sub> |
| Z4A/100kN | Z4A/100kN/ZKM   | 2.32        | 395 | 277 | 334 |     | 50 <sup>-0.130</sup> <sub>-0.290</sub> |
| Z4A/200kN | Z4A/200kN/ZKM   | 4.19        | 447 | 317 | 382 |     | 64 <sup>-0.170</sup> <sub>-0.330</sub> |
| Z4A/500kN | Z4A/500kN/ZKM   | 20.1        | 623 | 432 | 522 |     | 90 <sup>-0.170</sup> <sub>-0.390</sub> |

### Installing:

- Screw the thread of the ZKM force introduction part into the transducer's inside thread until it reaches the stop, then loosen it by one turn.

**EDO4 thrust piece** for precision measurement, for example DIN EN10002-3 or ISO/FDIS 376 calibrations

| Type      | Thrust piece | Weight (kg) | Ø A  | Ø B | C  | D  | E  | F  | α   |
|-----------|--------------|-------------|------|-----|----|----|----|----|-----|
| Z4A/20kN  | EDO4/20kN    | 0.34        | 16.2 | 48  | 29 | 8  | 5  | 12 | 18° |
| Z4A/50kN  | EDO4/50kN    |             | 20.2 |     | 29 |    | 5  |    |     |
| Z4A/100kN | EDO4/100kN   | 1.58        | 30.2 | 80  | 45 | 10 | 5  | 23 | 18° |
| Z4A/200kN | EDO4/200kN   |             | 39.2 |     |    |    |    |    |     |
| Z4A/500kN | EDO4/500kN   | 4.35        | 72.4 | 112 | 68 | 15 | 12 | 30 | 15° |

## 6 Electrical connection

### 6.1 Instructions for cabling

- Always use shielded, low-capacity measurement cable (HBM cables meet these requirements).
- Do not lay measurement cable parallel to high-voltage power lines or control circuits. If this is not possible (e.g. in cable ducts) protect the measurement cable, e.g. with armoured steel tube and maintain a minimum distance of 50 cm from the other cables. High-voltage power lines and control lines should be twisted (15 turns per metre).
- Avoid stray fields of transformers, motors and contactors.
- Do not earth transducer, amplifier and display device more than once. All the devices in the measuring chain are to be connected to the same earthed conductor.
- The screen of the connection cable is connected to the transducer housing.

### 6.2 Wiring pin assignment

The 3m long transducer connection cable has colour-coded free wire ends. The cable shielding is connected in accordance with the Greenline concept. This means that the measurement system is surrounded by a Faraday cage. Electromagnetic interference will not affect the measurement system.

Connectors to CE standard are to be fitted at the free end of the transducer.

**The shielding is here to be laid over the whole area.**

If a different connection technique is used then good EMC shielding is to be provided in the wiring loom, the shielding again being laid over the full area (see also HBM Greenline Information, document G36.35.0).

If the transducer is connected according to the following connection diagram then when the transducer has compressive loading the output voltage at the measuring amplifier is positive.

### Six-wire connection

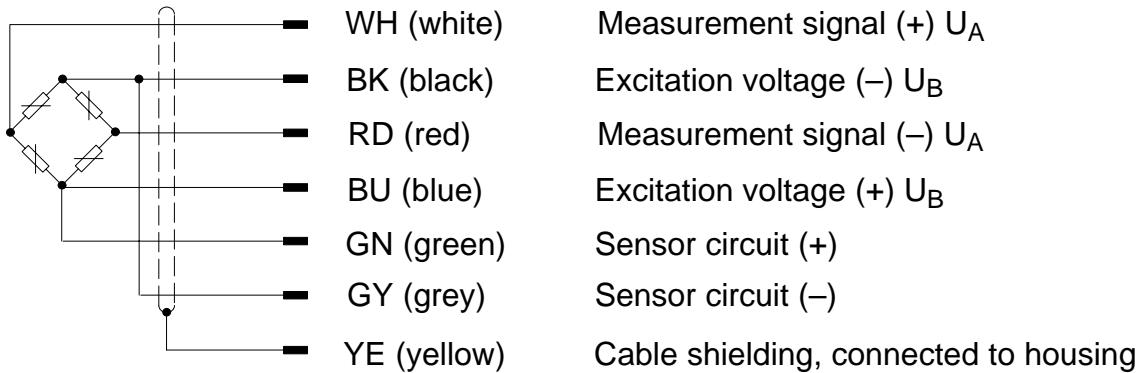

Fig. 6.1: Z4A, Z4A-G pin assignment

## 7 Specifications

| Force transducer type                                                              |                    | Z4A / Z4A-G |                    |       |     |      |      |      |  |  |  |  |  |  |

### Konformitätserklärung

### Declaration of Conformity

### Déclaration de Conformité

Document: 135/06.1999

Wir,

We,

Nous,

**HBM Mess- und Systemtechnik GmbH, Darmstadt**

erklären in alleiniger Verantwortung,  
daß das Produkt

declare under our sole  
responsibility that the product

déclarons sous notre seule  
responsabilité que le produit

#### *Kraftaufnehmer der Typenreihe Z4A*

auf das sich diese Erklärung  
bezieht, mit der/den folgenden  
Norm(en) oder normativen  
Dokument(en) übereinstimmt (siehe  
Seite 2) gemäß den Bestimmungen  
der Richtlinie(n)

to which this declaration relates is  
in conformity with the following  
standard(s) or other normative  
document(s) (see page 2)  
following the provisions of  
Directive(s)

auquel se réfère cette déclaration  
est conforme à la (aux) norme(s) ou  
autre(s) document(s) normatif(s)  
(voir page 2) conformément aux  
dispositions de(s) Directive(s)

89/336/EWG - Richtlinie des Rates vom 3. Mai 1989 zur Angleichung der Rechtsvorschriften der Mitgliedsstaaten  
über die elektromagnetische Verträglichkeit, geändert durch 91/263/EWG, 92/31/EWG und  
93/68/EWG

Die Absicherung aller produkt-  
spezifischen Qualitätsmerkmale  
erfolgt auf Basis eines von der DQS  
(Deutsche Gesellschaft zur Zertifi-  
zierung von Qualitätsmanagement-  
systemen) seit 1986 zertifizierten  
Qualitätsmanagementsystems nach  
DIN ISO 9001 (Reg.Nr. DQS-  
10001). Die Überprüfung der sicherheits-  
relevanten Merkmale (Elektro-  
magnetische Verträglichkeit,  
Sicherheit elektrischer Betriebs-  
mittel) führt ein von der DATech  
erstmals 1991 akkreditiertes Prüf-  
laboratorium (Reg.Nr. DAT-P-006  
und DAT-P-012) unabhängig im  
Hause HBM durch.

All product-related features are  
secured by a quality system in  
accordance with DIN ISO 9001,  
certified by DQS (Deutsche Gesell-  
schaft zur Zertifizierung von  
Qualitätsmanagementsystemen)  
since 1986 (Reg. No. DQS-10001).  
The safety-relevant features  
(electromagnetic compatibility,  
safety of electrical apparatus) are  
verified at HBM by an independent  
testing laboratory which has been  
accredited by DATech in 1991 for  
the first time (Reg. Nos. DAT-P-006  
and DAT-P-012).

Chez HBM, la détermination de  
tous les critères de qualité relatifs à  
un produit spécifique est faite sur la  
base d'un protocole DQS  
(Deutsche Gesellschaft zur Zertifi-  
zierung von Qualitätsmanagement-  
systemen) certifiant, depuis 1986,  
notre système d'assurance qualité  
selon DIN ISO 9001 (Reg.Nr. DQS-  
10001). De même, tous les critères de  
protection électrique et de  
compatibilité électromagnétique  
sont certifiés par un laboratoire  
d'essais indépendant et accrédité  
depuis 1991 (Reg.Nr. DAT-P-006 et  
DAT-P-012).

Document:

135/06.1999

Diese Erklärung bescheinigt die Übereinstimmung mit den genannten Richtlinien, beinhaltet jedoch keine Zusicherung von Eigenschaften.  
Die Sicherheitshinweise der mitgelieferten Produktdokumentation sind zu beachten.

Folgende Normen werden zum Nachweis der Übereinstimmung mit den Vorschriften der Richtlinie(n) eingehalten:

**EN 50082-2 : 1995**

**Elektromagnetische Verträglichkeit (EMV); Fachgrundnorm Störfestigkeit; Teil 2: Industriebereich; Deutsche Fassung**

**EN 55011 : 1998**

**Funk-Entstörung von Elektrischen Betriebsmitteln und Anlagen; Grenzwerte und Meßverfahren für Funkstörungen von industriellen, wissenschaftlichen und medizinischen Hochfrequenzgeräten (ISM-Geräten) (CISPR 11 : 1997, modifiziert); Deutsche Fassung; Klasse B**

This declaration certifies conformity with the Directives listed above, but is no asseveration of characteristics.

Safety directions of the delivered product documentation have to be followed.

The following standards are fulfilled as proof of conformity with the provisions of the Directive(s):

Cette déclaration atteste la conformité avec les directives citées mais n'assure pas un certain caractère.

S.v.p. observez les indications de sécurité de la documentation du produit ajoutée.

Pour la démonstration de la conformité aux disposition de(s) Directive(s) le produit satisfait les normes:
