

SA40011 – Dual Axis Signal Conditioning Module

The **SA40011- Dual Axis Signal Conditioning Module** is a bipolar DC input/output operated device, specifically designed to interface directly with the entire line of *SP5000 Series Dual Axis Tilt Sensors*. This PC board mountable module internally converts the DC input voltage into an AC excitation voltage for the sensor, and demodulates the sensor output into a smooth amplified DC output voltage. Incorporating a proprietary signal processing algorithm, and an external temperature compensation sensor (optional), normal measurement errors are severely reduced. The **SA40011** also features overload protection, and is 100% reliability tested to provide the highest quality available.

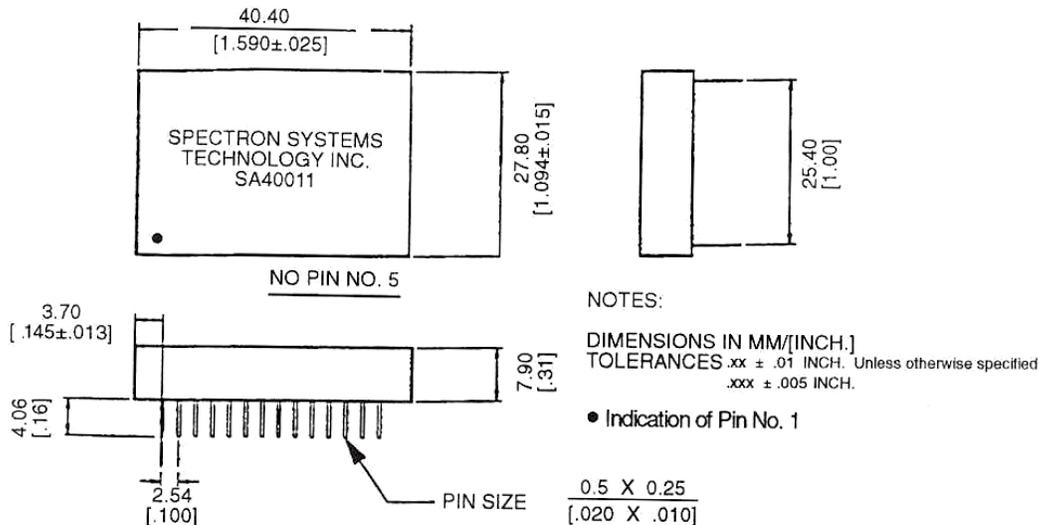

General Specifications

- Input voltage +/-10 to +/-16Vdc
- Input current 12mA
- Sensor excitation 10 V pp, square wave
- Input impedance 5 megohms
- Output +/-7Vdc @ +/-10Vdc input
- Time constant 150 msec
- Offset adjustment +/-1Vdc
- Output ripple 0.2% / Vdc output
- Temperature coefficients (module w/out sensor)
 - Null 60 microvolts / C^o (typical)
 - Scale 0.02% / C^o
- Output short duration Continuous
- Temperature range
 - Operating -20 to +70C^o
 - Storage -40 to +80C^o

Temperature Compensation

- Temperature compensation of the assembly (module and sensor) can be accomplished using an external silicon temperature sensor (KTY81-120) and resistor (47k ohm typical). With this configuration, it is possible to reduce the scale temperature coefficient error from a 0.3%/C^o (nominal), to 0.03%/C^o (nominal). Please see wiring diagram for connection points.
